

Aanya Lari

alari@ucsd.edu • San Diego, California • +1 (858) 226-5325

Detail-oriented data professional with hands-on experience in dashboard development, machine learning, and data visualization. Proven ability to build AI-powered systems and predictive models, with applications across domains. Strong foundation in Python, SQL, and statistical analysis, backed by industry experience and IEEE publications.

Education

University of California, San Diego

Master of Science in Data Science

Relevant Coursework: Data Management, Probability and Statistics, Linear Algebra

San Diego, California

Jan 2026-2027

Mukesh Patel School of Technology Management and Engineering, NMIMS

Bachelor in Technology, Computer Engineering, **CGPA: 3.78/4**

Relevant Coursework: Deep Learning, Machine Learning, Artificial Intelligence, Big Data Analytics, Programming for Problem Solving

Mumbai, India

Aug 2020-2024

Professional Experience

Marsh McLennan Global Services

Data Analyst

Mumbai, India

Jan 2024 - Mar 2025

- Developed and optimized 30+ Qlik Sense dashboards, integrating data from multiple sources to enhance accuracy and support data-driven decisions across global teams
- Performed EDA and feature engineering on internal consultancy datasets to identify key safety, risk, and performance trends
- Partnered with global stakeholders to translate business needs into actionable data models and visualizations
- Defined and monitored 20+ insurance KPIs, improving business insight and operational efficiency through clear, actionable metrics
- Standardized data governance processes by documenting data flows, implementing validation checks, and collaborating with cross-functional teams using Agile and Confluence

Jio Platforms Ltd.

Data Science Intern

Mumbai, India

June - Aug 2022

- Applied unsupervised learning to detect behavioral patterns in environmental systems, enhancing decision-making interfaces for technical teams monitoring water quality and anomaly detection
- Leveraged time-series analysis to track trends within the data to gain insights for stringent monitoring of water quality to identify deviations, reducing inefficiencies in heat transfer by 15%

Academic Projects

Culinary Curator - An AI-Powered Recipe Assistant

- Compared Word2Vec, LSTM, FastText, BERT, and Logistic Regression for a recipe recommendation system and a custom CNN, MobileNetV2 for ingredient recognition, achieving 95% accuracy with MobileNetV2
- Enhanced project scope by integrating GPT-2 model for automated recipe generation and Edamam API for nutritional analysis, providing a comprehensive solution
- Tools: Python, VSCode

Toxic Comment Classification System

- Developed a multi-label classification system using GRU and LSTM models to identify toxic comments, achieving 60.4% precision with GRU and 79.5% recall with LSTM
- Integrated pre-trained word embeddings (GloVe), resulting in more accurate and context-aware identification of toxic comments, reducing harmful content in online communities
- Tools: Python, VSCode

Calories Burnt Prediction

- Developed calorie prediction models using XGBoost, Linear Regression, and Ridge Regression, achieving a 99.8% R2 score for XGBoost
- Applied data normalization and feature correlation analysis, enhancing model performance for personalized fitness tracking
- Tools: Python, PyCharm

Publications

- Aanya Lari, Ved Naik, et al. "Culinary Curator: An AI-Powered Recipe Assistant" IEEE International Conference on Intelligent Systems and Advanced Applications, 2024
- Aanya Lari, Ved Naik, et al. "Enhancing Toxic Comment Classification: A Deep Learning Approach with Pre-trained Language Models" IEEE International Conference on Intelligent Systems and Advanced Applications, 2024

Technical Skills

SQL, Python, QlikSense, QlikView, VSCode, Jupyter Notebooks, PyCharm, Microsoft Office
