EDUCATION

University of Illinois Chicago

Master in Computer Science, **GPA 4.0/4.0**

Fall 2025 - Present

Relevant Coursework: Algorithms, Data Science, Systems Performance & Concurrent Computing,

Advanced Topics in Software Engineering, Representations in Algorithm Design

- Rust system programming focusing on synchronization, contention, and performance analysis..
- Data Science project using Python focusing on EDA, visualization and predictive modeling.

Savitribai Phule Pune University

Bachelor of Engineering (Computer), **First Class With Distinction**

Jun 2014 – May 2018

TECHNICAL SKILLS

- Programming Languages: C#, Rust, Python, C/C++, SQL, Node.js, TypeScript
- Technologies/Tools: Git, OAuth 2.0, GraphQL, REST APIs, Jenkins CI/CD
- Interests: Algorithmic Problem Solving, System Design, Cloud Integration, Software Development Life Cycle (SDLC) and Systems Performance Analysis.

WORK EXPERIENCE (5.5+ years)

UIC Learning Technology Solutions

Jan 2026 – Current

Graduate Teaching Assistant - Client Support Specialist (Part time)

- Provided end-to-end Tier-2 technical support for institutional learning technologies, assisting students and guiding faculties in adopting educational technologies

nCircle Tech Pvt. Ltd

Senior Software Developer

Jul 2020 – Dec 2023

- Developed and maintained scalable, production-grade software systems spanning desktop applications, full-stack web applications, and cloud integrations.
- Designed and implemented secure session management using Node.js and SQL, addressing authentication, authorization, and concurrency concerns.
- Integrated multiple cloud storage systems (Google Drive, Dropbox, Procore, Trimble, Aconex) into a .NET 7 (C#) backend, handling distributed APIs and failure scenarios.
- Engineered a custom Power BI visual in JavaScript and GraphQL-based data connector, implementing a robust data ingestion and transformation pipeline from Autodesk Cloud

to an interactive 3D visualization engine, enabling real-time element selection, dynamic coloring, and attribute-driven filtering, while ensuring data consistency, and freshness.

- Participated in end-to-end software development life cycles including system design, implementation, code reviews, performance tuning, debugging, and documentation.
- Collaborated with cross-functional teams in agile workflows, sprint planning, and retrospectives.

Member of Technical Staff

Jun 2018 – Jun 2020

- Developed a SolidWorks add-in using C# with asynchronous REST APIs, to provide fast, reliable cost estimation for 3D models.
- Migrated a legacy AutoCAD plugin having 20K+ lines of VB6 code to C# within 6 months, improving memory safety, performance, and maintainability.
- Designed and Built a full-stack system (Vue.js, Node.js, SQL) with authentication, licensing, and API integrations.
- Designed normalized SQL schemas for multi-role user management and access control.
- Implemented security improvements addressing security vulnerabilities such as SQL injection and CORS, based on OWASP/CWE guidelines.
- Contributed to iterative development, debugging, and system stability improvements.
- Contributed to code reviews, bug fixing, and incremental feature development.

AWARDS AND ACHIEVEMENTS

- Employee of the Quarter - Issued by nCircle Tech Jul 2023 – Sep 2023
- Runner-up Hackathon 2019 - Issued by nCircle Tech Oct 2019
- Extra Mile Award - Issued by nCircle Tech Jun 2019
- Volunteered in “ML in python” workshop organized under The Institution of Engineers India (IEI) Students Chapter Aug 2017
- Scored 96% in Junior (11th) and 97% in Senior (12th) Year of High School in Computer Science (C++). [1st among 100+ students] Apr 2012 - Mar 2014
