EDUCATION

UC Santa Barbara - Bachelor of Science: Data Science, Statistics

Expected Graduation: June 2026

- Relevant Coursework: Data Structures & Algorithms, Regression Analysis, Data Science, Adv. Probability and Statistics

EXPERIENCE

AI/LLM Model Trainer (Mercor)

August 2025 - November 2025

- Evaluate large language models, enhancing multilingual performance in English and Hindi across diverse domains.
- Engineer high-quality reference answers and evaluation rubrics to improve accuracy, nuance, and cultural relevance.
- Audit AI outputs for hallucinations, bias, and tone alignment, applying policy compliance and quality control standards.
- Contribute to improving multilingual NLP pipelines supporting global AI products at scale.

Research Intern (Think Neuro, Inc.)

May 2024 - August 2024

- Co-led a research team focused on Neurotechnology, specializing in Deep Brain Stimulation as the lead associate.
- Led team's efforts to analyze data and identify trends by using machine learning algorithms, resulting in increased efficiency.
- Created graphs and bar plots to visualize data trends using R, applying statistical analysis to ensure accurate representation.
- Managed and coordinated team tasks, ensuring project milestones were met within deadlines, producing high-quality results.

Secretary/Project Lead (ACM SIGGRAPH @ SJSU)

September 2023 - May 2024

- Led team in designing an action-adventure game with a strong focus on narrative-driven storytelling and character growth.
- Maintained accurate records of chapter meetings, activities, and membership, facilitating easy access to historical data.
- Effectively managed internal chapter communication, including emails and announcements, enhancing member engagement.
- Collaborated with fellow chapter officers to achieve chapter goals and create a thriving academic community.

PROJECTS

Containerized API Deployment - AWS EC2, Docker, GitHub Actions, FastAPI

December 2025

- Built a lightweight REST API using FastAPI and exposed health and version endpoints for service validation.
- Containerized the application using Docker to ensure consistent execution across local and cloud environments.
- Implemented CI using GitHub Actions to automatically run tests on each push and pull request.
- Deployed the containerized service on AWS EC2 and configured environment variables and restart policies for operation.

TripGenie - AI Travel Planner (Published PyPi Package)

November 2025

- Published an AI travel-planning tool to **PyPI** (pip install tripgenie) with automated budgeting and high-grade itineraries.
- Engineered an OpenAI-based itinerary generation pipeline producing travel plans with activity and pacing optimization.
- Designed a production-ready Python module with safe data loading, dependency management, and PyPI distribution.
- Built architecture supporting future ML models for recommendation scoring, personalization, and real-time API integrations.

World Happiness & War Analysis - Regression & Visualization

July 2025

- Conducted multi-year analysis of 20+ countries using World Happiness data to examine socio-economic trends during war.
- Built and interpreted multiple linear regression models to quantify the effects of war on macroeconomic well-being indicators.
- Performed correlation and residual analysis to validate model assumptions and isolate high-impact predictors.
- Designed and deployed clear data visualizations using ggplot2 to communicate findings to a non-technical audience.

Spotify Song Recommender - Machine Learning Project

May 2025

- Developed a personalized music recommendation system using Spotify's Web API and extracted audio features such as danceability, energy, tempo, and valence.
- Applied unsupervised learning (K-Means clustering) to group songs based on audio similarity for genre and mood-based recommendations.
- Designed an interactive Streamlit app that allows users to select a favorite song and receive tailored suggestions.
- Prototyped LLM-powered playlist generation using natural language prompts to align user intent with underlying audio feature clusters.

SKILLS

Languages & Frameworks: Python, Java, C++, Swift, HTML/CSS, SQL, FastAPI, pytest

Cloud & DevOps: AWS (EC2), Docker, GitHub Actions (CI/CD fundamentals), Linux (basic)

Tools & Platforms: GitHub, Firebase, R (ggplot2, dplyr), scikit-learn, React, Next.js, Streamlit, Typer

Specialties: Prompt Engineering, LLM Workflow Design, Machine Learning, Web Development, Data Structures & Algorithms, Data Visualization, UX/UI Design

Other: Statistical Analysis, REST API Development, Containerized Deployments, Basic CI/CD Pipelines, Agile Collaboration, API Integration, AI Productivity Tools
