Home: Milpitas, CA | School: Irvine, CA

EDUCATION

University of California, Irvine

B.S. in Computer Science

Irvine, CA

Sept. 2023 – June 2027

- Dean's List Honors: Fall 2023—Spring 2025

TECHNICAL SKILLS

Programming: C/C++, Python, JavaScript, Java

Developer Tools: Cursor, Claude Code, Git, Jupyter, Google Colab, PyCharm, IntelliJ, Linux, Visual Studio Code

AI/ML: GPT-4, LangChain, TensorFlow, Scikit-learn

Systems & Security: Windows API, Detours, DLL Injection, API Hooking, Windows Kernel Development, AutoIt

Web: React.js, Firebase, SQL

Virtualization: VMware vSphere, Workstation Pro, Windows Server

EXPERIENCE

Forcepoint – Software Development Intern | Campbell, CA

July 2025 – Oct 2025

- Enforced endpoint DLP controls to prevent unauthorized USB data exfiltration by intercepting 6 critical Windows file APIs (CreateFileW, WriteFile, CopyFileW, MoveFileW, CopyFileExW, MoveFileExW) using C/C++, DLL injection, and Microsoft Detours.
- Automated endpoint compliance validation using VMware vSphere/Workstation and AutoIt scripting, and integrated secure REST-based communication (cURL/SSL) for policy updates and reporting.
- Implemented dynamic, multi-threaded hook injection with a lightweight system tray application to provide real-time process monitoring while maintaining system stability.

Dosety Inc. – Founding Engineer | Irvine, CA

Dec 2023 – Present

- Built an AI-powered supplement platform using GPT-4, LangChain, React.js, and Firebase, integrating RAG retrieval and licensed dietitian oversight for safe personalized nutrition plans.
- Engineered full-stack infrastructure with automated report generation, tailored supplement recommendations, and scalable cloud architecture.
- Secured \$64K in non-dilutive funding, filed a fast-track patent, and established a strategic OEM partnership for supplement manufacturing.

PROJECTS

TinyVPN Client – Virtual Interface VPN for Windows

Oct 2025 – Nov 2025

- Built a Windows VPN client with a kernel-mode NDIS 6.30 miniport (WDF) virtual NIC, enforcing OS-level packet interception and secure traffic routing.
- Secured network traffic over untrusted networks using AES-256-CBC payload encryption and TLS 1.2+ transport (OpenSSL).
- Implemented a user-kernel control plane with custom IOCTLs for packet delivery, routing control, and real-time traffic monitoring.

CERTIFICATIONS & COURSEWORK

Google Cybersecurity Professional Certificate ([Link](#), June 2025): Hands-on training in network security, system vulnerabilities, threat detection, incident response, and risk management using Splunk (SIEM), Wireshark, Suricata, Google Chronicle, and IDS/IPS tools.

Data Science and Machine Learning: Making Data-Driven Decisions — *MIT Schwarzman College of Computing* ([Certificate](#), Nov 2024): Built predictive models using Python, Scikit-learn, Pandas, and TensorFlow; performed EDA, data cleaning, and ML optimization to translate insights into actionable business strategies.

Related Coursework: Computer Networks, Systems Design, Machine Learning, Data Structures & Algorithms, Python Programming, C/C++ Programming, Computer Organization (Assembly), Probability & Statistics, Biomedical Engineering.
