

Brian Noli C. Docena

US Citizen | docena.brian@gmail.com | (925)-963-7048 | LinkedIn: Brian-Docena | GitHub: BrianDoce

EDUCATION

University of California, San Diego

San Diego, California

B.S. in Data Science

Expected Graduation, 2026

- o **Related Coursework:** Probabilistic Modeling and Machine Learning, Statistical Methods, Introduction to Data Visualization, Introduction to Data Mining, Introduction to Data Management, Data Structures and Algorithms, Linear Algebra, Analytical Geometry and Calculus, Theoretical Foundations of Data Science
- o **GPA: 3.77/4.00**

SKILLS

Programming: Java, Python, SQL, SAS, R

Tools: Jupyter Notebooks, AWS, Git, Tableau, GitHub, Excel, PowerBI, SQLite, Postgres, MySQL, Docker, Anaconda

WORK EXPERIENCE

CVS Pharmacy

Del Mar, California

Pharmacy Technician Shift Supervisor

May 2025 - Present

- Resolved customer and insurance data discrepancies in real time, improving workflow efficiency during peak hours.
- Coordinated with pharmacists and technicians to manage queue prioritization in an operational environment

PROJECTS

SDG&E Field Operations Route Optimization & Cost Reduction Analysis | *Python, GeoPandas, OSMnx, Mapbox* | [Link](#)

- Analyzed real technician route data and compared against theoretically optimized routing models to quantify potential reductions in mileage and operational costs.
- Modeled projected fuel, labor, and vehicle usage savings by evaluating deviations between actual field routes and optimized path simulations.
- Built visual dashboards to communicate cost saving opportunities and operational efficiency gaps, translating analytics findings into actionable insights for field operations planning.

Oxygen Consumption Visualization | *HTML, CSS, JavaScript, D3, Python* | [Link](#)

- Engineered an interactive data visualization tool using D3.js and JavaScript to explore oxygen consumption trends across treadmill speeds for males and females, enabling users to intuitively compare physiological performance metrics.
- Preprocessed and normalized raw physiological time-series data (from PhysioNet) in Python, applying data cleaning, transformation, and scaling techniques to ensure statistical validity and visual clarity.
- Collaborated in a cross-functional team of 4 to deliver an end-to-end data visualization solution focused on analyzing gender-based differences in oxygen consumption during exercise, using open-access treadmill data from PhysioNet.

Customer Segmentation Project | *Python, Pandas, Yellowbrick, Scikit-Learn, Tabulate* | [Link](#)

- Engineered meaningful features, reduced multicollinearity, and optimized data quality for clustering and segmentation tasks.
- Implemented k-means clustering and RFM analysis to segment customers, leveraging the elbow and silhouette methods for optimal cluster determination.
- Applied Principal Component Analysis (PCA) to reduce feature dimensionality and improve model performance.
- Leveraged Isolation Forest Algorithm to identify outliers within my data.

Toyota and Honda Sentiment Analysis | *Python, Pandas, BeautifulSoup, Selenium, NLTK Vader* | [Link](#)

- Extracted, web scraped, and pre-processed over 1000+ user reviews, ratings, and pricing details of Toyota and Honda cars from Edmunds.com, ensuring data quality and consistency.
- Applied natural language processing (NLP) techniques such as sentiment analysis using NLTK Vader to derive insights from unstructured user review text.
- Conducted exploratory data analysis (EDA) to uncover trends in user ratings, review sentiments, and car pricing across multiple models.
- Utilized TF-IDF vectorization to analyze term importance and extract key themes from user reviews.
