SUMMARY

Aspiring Cognitive Science researcher and AI Strategist focused on building human-centered intelligent systems. I explore how AI shifts human cognitive landscapes to identify emerging market opportunities and next-generation pain points, leveraging Machine Learning to enhance user accessibility and streamline digital-physical workflows.

SKILLS & TOOLS

- **Technical:** Python, SQL/Database Fundamentals, Matlab, API Integration
- **Product & Design:** Notion, Figma, Google Analytics, Microsoft Office, Cursor, Claude
- **Languages:** English, Mandarin, Cantonese

EDUCATION

University of California, San Diego

San Diego, CA | Sep 2025 – Jun 2027

- **Major:** B.S. Cognitive Science (Specialization in Machine Learning & Neuro Computation)
- **Minor:** Entrepreneurship & Innovation
- **Relevant Coursework:** Cognitive Engineering, LLMs and CogSci, Natural Language Processing, Research Methods, Data Structures, Human-Centered Interaction, Product Management

RELATED EXPERIENCE

Data Engineer & Project Co-Lead | Triton Neurotech (UCSD)

San Diego, CA | Oct 2025 – Present

- Engineering an **LLM-based classification pipeline** for sign language recognition, gaining deep familiarity with model behavior, latency, and data integrity.
- **Collaborating** with hardware and software teams to implement feedback loops, reducing model noise interference in real-time sensor data.
- **Translates technical constraints** of AI models into clear documentation for non-technical stakeholders.

Project Manager & UX Researcher | Design for America

San Diego, CA | Sep 2025 – Jan 2026

- Cooperated with a **cross-functional** team of 5 to redesign the Mental Health America website homepage, delivering **AI Chatbot** feature prototypes on schedule.
- Defined the **product roadmap** and launch strategy, managing **stakeholder** expectations and presenting key insights to organizational leadership.
- Conducted user research, surveys, testing and market analysis to validate product-reality fit, ensuring product requirements align with actual user pain points.

PROJECTS

[Mental Health America Website Redesign](#) | Figma, Google Workspace

San Diego, CA | Sep 2025 – Jan 2026

- Defined the product positioning, shifting the **value proposition** from a static repository to an AI-assisted interactive support system.
- Identified key **user friction points** in the existing navigation journey, recognizing that "information overload" caused high bounce rates for anxiety-prone users.
- Championed the "AI Chatbot" strategy as a solution to accessibility barriers, positioning it as a 24/7 personalized guide to improve **user engagement** and retention.

JustWASHit | Python, Gemini API

San Jose, CA | Jan, 2026

- **Awarded "Best Integration of Gemini API"** for the sophisticated use of Multimodal LLMs to interpret physical environments and generate contextually aware, escalating user notifications.
- Developed a high-precision Dish ID system using **Vector Embeddings**, mapping visual features of kitchenware into a high-dimensional space to enable 1:1 ownership matching.
- Conceived the original product vision and **value proposition** for an IoT-based social accountability system, transforming a common "roommate friction" point into a market-ready AI prototype.
