

Daniel Phan

(669) 246-3164 | danielphan5740@gmail.com | linkedin.com/in/dphan06 | github.com/d4phan

EDUCATION

University of California, San Diego

Expected March 2027

B.S. in Data Science

- Coursework: Data Structures & Algorithms, Database Systems, Probabilistic Modeling & ML, Data Visualization, Data Analysis & Inference, Data Science in Practice

EXPERIENCE

Gordon Rees Scully Mansukhani LLP

June 2024 - Sept. 2024

IT Support Analyst Intern

San Jose, CA

- Deployed and configured software across 50+ devices, automating provisioning workflows and reducing setup time firm-wide
- Triageed and resolved 100+ support tickets using systematic debugging, escalating complex issues and documenting resolutions
- Collaborated cross-functionally with IT and legal teams to maintain uptime and deliver technical solutions under tight deadlines

PROJECTS

Personal Portfolio Website | React.js, JavaScript, HTML, CSS

Oct. 2025 - Present

- Built full-stack responsive portfolio using React.js with reusable component architecture and modular CSS for maintainability
- Deployed to GitHub Pages via automated CI/CD pipeline, enabling continuous integration and version-controlled releases
- Implemented dynamic routing and state management with React hooks, improving page performance and user experience
- Structured project with Git branching workflows, conducting self-review and iterative debugging across feature branches

NBA Superstar Points Predictor | Python, SQL, Scikit-learn, XGBoost, Pandas

Mar. 2025 - June 2025

- Designed REST-style data pipeline in Python ingesting 22,000+ game records, applying schema validation and transformation logic
- Wrote SQL queries against relational database to extract, join, and aggregate datasets powering downstream ML model training
- Built and tested XGBoost regression model with cross-validation, iterating on features to minimize prediction error
- Managed full project lifecycle in Git with modular code structure, enabling reproducible experiments and clean deployment

Climate Change Coastal Visualization | JavaScript, D3.js, HTML, CSS

Dec. 2025

- Developed scrollytelling front-end application in JavaScript with D3.js, rendering interactive maps for 50+ US coastal regions
- Integrated NOAA climate APIs and CSV datasets, building a data processing layer for reliable ingestion and transformation
- Optimized DOM rendering and animation performance, reducing frame drop on large dataset transitions

Bikewatching | JavaScript, D3.js, Mapbox, HTML, CSS

Dec. 2025

- Built interactive front-end map application with Mapbox and D3.js, implementing real-time filtering and dynamic UI controls
- Designed component-based JS architecture separating data layer, rendering logic, and user interaction for clean code structure
- Optimized rendering with efficient data binning and aggregation pipelines handling 10,000+ trip records for smooth interaction

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: React.js, Node.js, PostgreSQL, D3.js, Pandas, NumPy, Scikit-learn, XGBoost

Tools: Git/GitHub, Docker, AWS, REST APIs, VS Code, Tableau, Mapbox, Matplotlib
