EDUCATION

Georgia Institute of Technology

Atlanta, GA

M.S. Computer Science

Jan 2026 – May 2028

- Concentration: Machine Learning
- Research: Data Science @ GT CLEF2026, HAAG: Natural History Catalog, Hacklytics 2026

Georgia Institute of Technology

Atlanta, GA

B.S. Aerospace Engineering (High Honors) GPA: 3.41/4.0

Aug 2020 – May 2024

- Awards: High Honors, Rebecca Beal Scholarship, Sidney Goldin Scholarship, Faculty Honors, Dean's List (4 years)
- Activities: Society of Physics Students, Astronomy Club, GT Salsa, GT Sailing, Knack Tutoring
- Relevant Coursework: Aerothermodynamics, Jet/Rocket Propulsion, Finite Element Analysis, Fluid/Solid Mechanics, Orbital Mechanics, Real Analysis I

EXPERIENCE

2nd Place Winner Vertical Flight Competition

Atlanta, GA

Undergraduate Simulation Lead (Rotorcraft)

Jan 2024 – June 2024

- Developed helicopter takeoff and landing simulation in FlightGear integrating Simulink
- Modeled animations for 2 rotating blades on helicopter by coding parameters in XML file
- Implemented PID control system in Simulink and recorded flight analytics in FlightGear
- Led team of 2 graduate students to produce competition ready simulation that won 2nd place for Georgia Tech

Vertically Integrated Project Robot Collective

Atlanta, GA

Undergraduate Researcher

Jan 2024 – May 2024

- Investigated design to build 2nd multi-robot test site for 8+ robots in Tech Square at Georgia Tech
- Collaborated with team of 5 engineers streamlining documentation for MATLAB files saving 1+ hour of setup time
- Assembled testing area for 2 robots and defined boundaries of area with calibrated camera
- Conducted bi-weekly presentations to electrical engineering professors on project progression

Course Projects

Atlanta, GA

Undergraduate Student

Aug 2020 – Present

- Trained species identification computer vision model on starfish images in Kaggle that had 75% accuracy
- Implemented numerical methods to solve aerothermodynamic parameters for hypersonic and supersonic aircraft
- Programmed MATLAB solvers for Hohmann and Bi-elliptic transfers using equations from orbital mechanics
- Developed MATLAB programs to solve aerothermodynamic parameters for jet and rocket propulsion systems

Robotech Hackathon

Atlanta, GA

Engineering Team Co-Lead

Apr 2022

- Co-designed aquatic microplastic collection robot in SolidWorks for final render in product video
- Planned and set team goals for 36-hour project timeline to ensure robot design ready for presentation to judges
- Co-led team of 4 engineers to produce product video and design for aquatic microplastic collection robot

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript/TypeScript, Java, Arduino, LaTeX, SQL, Dart, MATLAB, Qiskit, Bash, Rust

Frameworks: PyTorch, JAX, TensorFlow, Flutter, Angular, Next.js, React

Tools: OpenGL, Git, NumPy, Pandas, SolidWorks, Matplotlib, MySQL, AWS EC2, Unity, Blender, Simulink, WSL, Ubuntu, uv, Angular, Docker, Kubernetes, MongoDB, Anaconda, Gimp, CMake, Node.js, Miniconda, Figma, Canva, Google Colab, Kaggle, ChatGPT, Gemini, Slack, Zoom, Microsoft 365, Huggingface, Overleaf, StackBlitz, Jupyter Notebooks, OpenCV, Google Workspace, Seaborn, Scikit-learn, Tableau, Visual Studio, Visual Studio Code, Abaqus, FlightGear, Gitlab

Prototyping: Arduino, Circuits, 3D Printing, Physics Simulations, Trading, Wind Tunnels, Stress/Strain Testing, Titrations

Concepts: Orbital Mechanics, Solid/Liquid Rockets, Jet Engines, Data Structures, Algorithms, Aerothermodynamics, Numerical Analysis, Fluids, Optimization, Object-Oriented Analysis, Spacecraft Dynamics, Hypersonics/Supersonics, Finite Element Analysis, Control Analysis, Structural Analysis, Supervised/Unsupervised Learning, Natural Language Processing, Bayesian Statistics, High-Performance Computing, Quantum Computing, Computer Graphics, Shaders
