EDUCATION

University of California, San Diego

San Diego, CA

B.S. in Data Science (Focus on Machine Learning and Artificial Intelligence), Minor in Business Analytics

Expected graduation - March 2027

- **Provost Honors**
- **Related Coursework:** Data Structures and Algorithms in Java and Python, Advanced Algorithmic Analysis and Graph Theory, Empirical Risk and Optimization Theory in Machine Learning, Predictive Modeling, Data Visualization, Regression, Statistical Modelling & Analysis.
- **Activities and societies:** HDSI Student Council - Funding Committee Member, Data Science Student Society (DS3) - Project Lead, ACM Hack - Team Member, Product Management Club (PMC) - Product Manager, Women In Computing (WIC).

RELEVANT SKILLS

Artificial Intelligence & Data Science: Machine Learning, Large Language Models(LLMs), Data Analysis, Statistics, Predictive Modeling.

Programming: Java, Python, MATLAB, Power BI, SQL, HTML, CSS, R, JavaScript, SciKit Learn, AWS, Spark, Matplotlib, PyTorch, Pandas.

Tools & Productivity Software: Excel, SharePoint, Jira, Confluence, Notion, Figma, Miro, Pendo, Salesforce, Google Analytics, Prototyping.

Product Management: Competitive Analysis, User Research, Product Requirement Drafting, Feature Prioritization, Roadmapping, KPIs.

Interpersonal: Leadership, Management, Entrepreneurship, Adaptability, Teamwork and Collaboration, Negotiation, Accountability.

PROJECTS

StepSync – Best Project Award, DSC 106 Final Showcase (Top 5% out of 80 teams)

- Built an interactive gait analysis tool using computer vision and PhysioNet data to visualize posture and movement irregularities, with personalized comparisons to healthy walking models.

National Power Outages Severity Analysis

- Analyzed 2,000+ outages over 20+ years, uncovering trends in weather, infrastructure, and population density impacting severity. Conducted data preprocessing, feature engineering, fairness analysis, hypothesis testing, and predictive modeling to highlight key drivers of outage severity. Published an interactive web report ([Web-report-link](#)) highlighting a 30% rise in outages over the last decade.

Koreai - 2025 DataHacks at UCSD (Best Presentation Award out of 40+ teams)

- Developed a real-time computer vision application that analyzes facial features to predict users' undertones and seasonal color palettes, inspired by Korean color analysis.
- Implemented a k-Nearest Neighbors classifier trained on a custom dataset of 100+ celebrity images, leveraging MediaPipe and OpenCV to extract precise RGB values from eyes, lips, cheeks, and hair for accurate personalized recommendations.

SharpKids – 2024 Big Data Hackathon at SDSU (Second Place Winner out of 60+ teams and 200+ participants)

- Utilized data monetization to develop SharpKids, a [UI-Prototype](#) and product designed to integrate with Sharp Healthcare's existing app.
- Focused on exploring geospatial data and analysis to provide healthcare education to 10,000+ children across San Diego and the nation.

EXPERIENCE

Bluebeam

June 2025 - September 2025

Product Manager Intern, Platform and Data

- Leading quantitative and qualitative research across multiple customer segments to uncover unmet needs and market opportunities, informing the product strategy for Bluebeam Studio (3M+ global users), Bluebeam Trial, and Bluebeam Webstore.
- Defining feature vision, scope, and success metrics (OKRs) by analyzing Pendo, Google Analytics, and Salesforce data to evaluate feature engagement, funnel performance, and release impact.
- Mapping end-to-end user journeys to identify friction points, translating insights into PRDs, prioritizing features in the roadmap, and coordinating with Design and Engineering to align on accessibility, usability, and customer goals.

Data Science Student Society at UCSD

AI/ML Project Lead

January 2025 – June 2025

- Managed a cross-functional team of 5 and developed machine learning models (Logistic Regression, Random Forest, HistGradient Boosting, XGBoost) to analyze 10,000+ NHANES records, identifying high-risk demographics for diabetes.
- Engineered an iterative imputation pipeline and applied Repeated Stratified K-Fold cross-validation, increasing model recall by 26% and precision by 61% over the baseline. ([Final Project Poster](#))

Product Management Club

Vice President

March 2025 - Present

- Leading strategic planning and internal operations for a 60+ member student organization focused on product management.
- Coordinating cross-functional initiatives, including speaker events, case study workshops, and product hackathons.
- Mentoring members in core PM skills (product thinking, PRDs, roadmapping) while collaborating with the President to define OKRs, manage timelines, and scale club impact in the UCSD community.

UCSD Computer Science & Engineering Society

October 2024 - May, 2025

Technical Product Manager

- Leading the development and design of the MBX website, reaching 500+ researchers annually, to provide user-centered tutorials, comprehensive documentation, and increased visibility for the Paesani Lab's many-body energy and force calculator.
- Conducted competitive analysis of 10+ similar tools, aligning site functionality with industry standards and iterating on product requirements based on 50+ user insights from usability testing and feedback sessions.
- Coordinating a team of 8 across design, development, and research, defining project scope and facilitating weekly meetings.
