SUMMARY

Masters in Data Science with 1+ year of internship experience and building fast software development using AI tools. Shipped models for sales and demand forecasting and delivered measurable business outcomes (12% MAPE, 18% overstock reduction). Strong in Python, SQL, PyTorch, scikit-learn, and production-minded workflows (ETL, evaluation).

PROFESSIONAL EXPERIENCE

Wroley: Market Analysis Intern

Mar 2024 – Jun 2024

- Orchestrated predictive analytics workflows for sales using Statistics and machine learning techniques, enabling inventory optimization and data-driven pricing strategies, achieving **12% MAPE**.
- Optimized marketing decisions using feature engineering with seasonal demand trends and lowered off-peak overstock by **18%**.

Samsung: Data Scientist Intern

Dec 2022 – Aug 2023

- Spearheaded time series forecasting using ARIMA, Holt-Winters, and LSTM; improved model **accuracy to 91%**.
- Engineered preprocessing workflows including stationarity checks (ADF Test), seasonality decomposition, and outlier handling, improving model consistency across variable training windows (30-540 days).
- Achieved forecasting accuracy with **MAPE below 20%**, establishing benchmarks for model performance across domains like retail, weather, and energy consumption.

ACADEMIC PROJECTS

Legal Information Retrieval & Analysis Engine

- Architected a modular LangChain workflow making ai agents separating retrieval, context formatting, reasoning, and response generation, improving **maintainability by 40%**.
- Integrated Azure OpenAI API as the inference layer to serve responses via an API-based workflow, enabling scalable, production-style query handling.
- Integrated case law and federal regulation retrieval via ChromaDB vector stores, enabling context-aware answers across statutes, precedents, and regulatory texts.

AI-based Border X-Ray Scans

- Devised a hybrid model integrating Multi-Scale ResNet with Contextual Hierarchical Refinement, enhancing multi-label threat detection with a **precision of 93.5%** in X-ray imagery through multi-level feature fusion.
- Developed a PyTorch training pipeline with Focal Loss, threshold tuning, weighted sampling, and mixed-precision training, achieving 92% macro F1-score and **99% accuracy** on a large-scale imbalanced dataset.
- Implemented confidence-based visualizations for random samples and a relaxed accuracy metric, enhanced model evaluation and interpretability in real-world multi-object detection scenarios.

TECHNICAL SKILLS

Programming Language: Python, SQL, C++

ML/DS: Feature Engineering, Threshold Tuning, Imbalanced Learning (Focal Loss, Weighted Sampling), Threshold Tuning

Libraries: PyTorch, TensorFlow, scikit-learn, XGBoost, Pandas, NumPy, Matplotlib, Seaborn, OpenCV

NLP / GenAI: RAG, Embeddings, Vector Search, Azure OpenAI, Prompt engineering

BI/Visualization: Power BI, Tableau, Excel

Cloud/DevOps: AWS (S3, SageMaker), Docker, Git, GitHub Actions

EDUCATION

Arizona State University, Tempe (GPA: 3.59/4.0)

2024 – 2026

Master's in Data Science Analytics and Engineering

SRM University, Chennai (GPA: 9.19/10)

2020 – 2024

Bachelor's in Computer Science and Engineering

ACHIEVEMENTS

- Bagged 1st Place at NLP Expo 2022 for a real-time, multithreaded voice assistant with facial-recognition login and ambient-noise filtering
- Winner of SRM Project Expo 2023 for Crop Genie, a Flask-based ML crop advisory app delivering 99% accuracy.
