

Resume

Hilary Chung

(415) 769-7026 • Berkeley, CA • lalalary@berkeley.edu

EDUCATION

University of California, Berkeley

August 2022 - May 2026

B.A. Data Science with an emphasis in Business and Industrial Analytics | Minor in Industrial Engineering Operations Research

- **Relevant Coursework:** Data Structures and Algorithms, Principles & Techniques of Data Science, Principles of Economics, The Structure and Interpretation of Computer Programs, and Linear Algebra and Differential Equations

WORK EXPERIENCE

Google (Contract)

Mountain View, CA

AI Developer

August 2025 - December 2025

- Engineered a real-time speech-to-speech interview assessment system using Gemini for adaptive dialogue generation, integrating streaming speech-to-text, rubric-based evaluation, and text-to-speech synthesis for mock interviews
- Built evaluation pipeline benchmarking response quality, scoring consistency, and latency; optimized inference performance and token usage to meet real-time conversational constraints for scalable deployment

Visa

Bellevue, WA

Product Management Intern

May 2025 - Present

- Implemented 12+ GA4 tracking events and debugged instrumentation pipelines to ensure reliable event logging across 2,000+ merchant-facing pages, improving data accuracy, analytics integrity, and experimentation reliability
- Built and deployed a GA4 analytics dashboard processing behavioral data at scale, surfacing feature adoption patterns and usage trends to guide product roadmap decisions impacting 30,000+ active merchants across business segments

Unstructured AI

Berkeley, CA

AI Research Developer

August 2024 - December 2024

- Evaluated traditional vs hybrid RAG pipelines across diverse document types (text and images), identifying retrieval bottlenecks and optimizing query relevance while maintaining latency constraints for scalable production deployment

Zurich Insurance Company

Hong Kong Island

Underwriting Intern

June 2024 - August 2024

- Developed an automation tool to simulate User Acceptance Testing (UAT) using Selenium, optimizing completion of 50 questions in 2 minutes, which streamlined testing efficiency by 40% and save 10 hours of manual effort weekly

Wonderfil

San Francisco, CA

Data Consultant

January 2024 - May 2024

- Conducted Exploratory Data Analysis (EDA) on 1,000+ rows of water usage data using Python, identifying 5+ metrics like repeat user percentage and time distribution for visits, leading to strategic insights into user behavior

PROJECT

UC Berkeley College of Chemistry AI Chatbot | Python

Spring 2025

- Developing a Webflow-embeddable chatbot with a team of four for the MCB DNA Sequencing lab by embedding 5k words lab docs into local Llama-based RAG, answering 92 % queries in <1.2 s via Webflow widget

2D Array Game Engine

Fall 2023

- Designed and developed a 2D tile-based game engine to randomly generate explorable worlds by applying Object-Oriented Design Patterns (OOP) and implementing core classes such as Room, Hallway, and Movement
- Integrated Princeton alg4 libraries to enable player interaction (StdDraw) and game state saving (I/O module)
- Performed test-driven development by writing unit and integration tests using JUnit

Word Searching Engine

Fall 2023

- Built backend APIs replicating Google Ngram Viewer and Princeton WordNet using directed graphs and TreeMap structures to support efficient word frequency analysis and scalable hyponym query processing
- Implemented DFS-based semantic search enabling scalable exploration of large lexical datasets.

EXTRACURRICULARS

GenerativeAI at Berkeley | AI Developer

September 2024 - Present

- Developing production-ready AI systems, including RAG pipelines and chatbot deployments for client projects

SKILLS & INTERESTS

Skills: Python, Java, SQL | LLMs (Gemini, Llama), RAG | Pandas, NumPy, scikit-learn | Git, Selenium

Fluent Language : English, Cantonese, Mandarin | **Interests:** Music, Design, Fencing, Photography, Hiking
