EDUCATION

University of California, San Diego

B.S. in Data Science (GPA: 3.925/4.0)

La Jolla, CA

2025 – 2028

EXPERIENCE

Center for Community Energy (CCE)

Data Science Intern

San Diego, CA

Feb. 2026 – Present

- Building a community-targeting pipeline for CCE's MOVE Now initiative using SDG&E and City of San Diego building energy benchmarking data.
- Integrating facility, address, and parcel/ownership datasets to identify high-priority non-residential community hubs and their decision-making entities.

ACM Hack School

Full Stack Developer — 5-Week Workshop

San Diego, CA

Oct. 2025 – Nov. 2025

- Developed a full-stack web platform using React, Node.js, Express, and MongoDB, supporting real-time user voting and persistent data storage.
- Designed and implemented RESTful APIs and database schemas to support user polling logic and analytics.
- Collaborated in a fast-paced, iterative workshop environment emphasizing rapid prototyping, debugging, and peer code reviews.

UCLA Python for Economics

Two-Week Summer Institute Course

Los Angeles, CA

July 2022

- Analyzed stock market data using Python (Pandas, NumPy) to identify correlations, volatility patterns, and market trends.
- Created data visualizations with Matplotlib to communicate insights for data-driven investment decisions.
- Presented a portfolio-level statistical analysis of real-world equities, translating quantitative results into actionable conclusions.

PROJECTS

San Diego 311 Service Analysis & Predictive Modeling | *Python, CatBoost, Statsmodels* Jan. 2026 – Present

- Built a predictive pipeline on **2.8M+** Get It Done requests (2016–2025) using time-based splits and leakage-aware feature engineering.
- Developed and tuned **CatBoost** regression models with Optuna to predict service delays from request type, location, and temporal features.
- Identified a persistent service imbalance in pavement maintenance: Districts 5 & 6 had median response times **97 days longer** than other districts, supporting equity-focused policy analysis.
- Fit cross-classified **mixed-effects models** and found a consistent negative relationship between neighborhood monthly request share and response time.

Custom CNN for Image Classification | *PyTorch*

Nov. 2025 – Jan. 2026

- Designed and implemented a 4-layer convolutional neural network from scratch, achieving **89.5% accuracy** on the CIFAR-10 dataset.
- Built a complete training pipeline including batch normalization, dropout, data augmentation, and adaptive learning rate scheduling.
- Improved model generalization through systematic hyperparameter tuning, comparing optimizers (**Adam vs. SGD**) to evaluate convergence speed and robustness tradeoffs.

TECHNICAL SKILLS

Programming: Python, Java,

Data & Machine Learning: Pandas, NumPy, Scikit-learn, PyTorch, Matplotlib, Seaborn

Frameworks: React, Node.js, Express

Tools: GitHub, VS Code, MongoDB
