EDUCATION

North Carolina State University

B.S. Computer Science

Raleigh, NC

May 2026

Relevant Courses: *Data Structures and Algorithms, Operating Systems, Computer Security*

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Java, Python, Node.js, Swift, Rust

Frameworks and Tools: Vue.js, Angular, Spring, Next.js, React, Supabase, Docker, GCP, Pinecone, Express, Sci-kit Learn, SQLite, PyTorch MongoDB, Git, Ubuntu Linux

WORK EXPERIENCE

Fidelity Investments

June - August 2024, June - August 2025

Software Engineer Intern

Durham, NC

- **Parallelized stock data fetching** in **Java & Spring**, using **CompletableFuture** and **Spring WebFlux** to replace sequential calls decreasing load time by **10x** boosting performance for **1 M+ daily transactions**.
- **Implemented WCAG-compliant accessibility enhancements** in **Angular** to Fidelity's Option Trading Ticket and validated with **CAT** and **JAWS/Fusion**, improving usability for **100 k+** traders.
- **Developed an Angular onboarding form** cutting fintech client onboarding time and data-entry errors by **99%**
- **Designed JSON data store** for **26 fintech partners**, enabling retrieval and integration with **Tridion CMS**.
- Presented solution to **15 + stakeholders**, winning endorsement for future production rollout.

PROJECTS

MedFlix (TreeHacks 2026) | [Devpost](#)

- Built an **AI pediatric health platform** that converts doctor notes and medication data into **7 personalized animated episodes** explaining diagnoses and treatments in child-friendly language.
- Implemented a **medical grounding pipeline** combining OpenFDA and DailyMed drug labels with LLM retrieval to reduce hallucinations and ensure medically accurate explanations.
- Designed a structured **AI video generation pipeline** using scene-level prompt templates with the HeyGen API to produce cohesive multi-episode narratives for each patient condition.
- Integrated a **real-time voice AI assistant** using HeyGen LiveAvatar and LiveKit WebRTC enabling children to ask questions about diagnoses and receive contextual explanations.

Short Form Content Creation Engine (YHack 2024 Adobe track winner) | [Devpost link](#)

- Built an **Adobe Express add-on** that automatically generates scripts, visuals, captions, and voiceovers for educational short-form videos from a single prompt by integrating multiple AI services.
- Integrated **Fetch.ai agents** to orchestrate automated narration generation and downstream content assembly within a modular AI media workflow.
- Developed a **keyword-driven media enrichment system** that classifies transcript segments and dynamically attaches relevant GIFs and visual assets to improve viewer engagement.

Starwatch | [Link](#)

- Built a global Starlink latency visualization by aggregating **31M BigQuery network tests** into spatial grid cells optimized for real-time rendering on an interactive globe.
- Developed a regional congestion estimation model by combining Cloudflare Radar request distributions with diurnal traffic modeling and timezone normalization across **100+ regions**.
- Rendered **~9,615 Starlink satellites** directly in the browser by propagating live TLE orbital elements to geodetic coordinates every second with **zero per-frame server calls**.

Erica AI Study Coach (HackUNC Education Track winner) | [Devpost](#)

- Engineered a document processing pipeline using **PyPDF** and **custom Python preprocessing** to extract structured concepts from messy academic resources and transform them into AI-ready study material.
- Implemented **Socratic-style prompting and coaching logic** to guide students through reasoning steps, encouraging active learning and improved concept retention.
- Generated animated mathematical explanations using **Manim visualizations** to break down complex formulas and support visual learners during study sessions.
