

Jason Nguyen

Anaheim, CA | (248) 229-1971 | <https://www.linkedin.com/in/jason/> | jasonnguyen7506@gmail.com

EDUCATION

University of California, Irvine | Bachelor of Science in Computer Science, Minor in Informatics

June 2027 | GPA 3.52

Coursework: Programming in Java, Intermediate Programming in Python, Programming in C/C++, Boolean Algebra & Logic, Linear Algebra, Data Structure and Algorithms, Computer Organization

Languages: Java, Typescript, Javascript, Python, C++, C, SQL, HTML, CSS

Technical Skills: React.js, Next.js, Express.js, Flask, Redux Toolkit, Node.js, tRPC, Tailwind CSS, PyTorch, Scikit-learn, pandas, PostgreSQL, MongoDB, Supabase, AWS S3, Git, GitHub, Postman, REST APIs, Agile/Scrum, BeautifulSoup, Redis, Docker, Kubernetes, NumPy, Unit testing, Agile Development, Debugging, CI/CD, Microservices, OAuth

WORK EXPERIENCE

Union of Vietnamese Student Association (Next.js, Typescript)

August 2025 - Present

Software Engineering Intern

Garden Grove, CA

- Developing website pages for nonprofit network of **3,000+** members across 12 universities, including searchable program discover, past and future event pages, leadership and sponsorship pages and reusable profile components that improve user engagement
- Built typed UI components using TypeScript interface contracts, standardizing data models across modules and reducing duplicated logic by **67–88%** in profile and event features significantly improving long-term maintainability.

Playtime Planning

October 2025 - December 2025

Software Engineering Intern

Irvine, CA

- Implemented relevance re-training for LLM responses, enabling model retraining and improving AI assistant answer accuracy by **18%**, informed by user feedback on missing and low-relevance results through a simple feedback system.
- Refactored and optimized **13%** of React components from desktop-only layouts to responsive, mobile-friendly implementations

Cache.AI (Next.js, Typescript, Supabase)

July 2025 - September 2025

Software Engineering Intern

Remote

- Enabled internal interview scheduling by extending backend API endpoints and integrating them with the recruiter calendar UI.
- Created Postman tests for **40+** endpoints, uncovering edge-case and data-base failures, reducing API-related staging bugs by **60%**

LEADERSHIP ACTIVITY

UCI ICSSC - PeterPortal (TypeScript, tRPC, Redux Toolkit, PostgreSQL, Next.js)

November 2025 - Present

Full Stack Software Developer

- Contributing to AntAlamanc Planner, comprehensive course discovery and planning web app used by **17000** UCI students per month
- Created instantaneous loading for courses by building a redux caching layer that eliminates redundant API calls
- Reducing course catalog load times by **40–60%**, after the initial API call, saving **1,700 minutes** of aggregate user wait time monthly
- Implemented a global 404 routing mechanism in React to redirect all undefined routes to a custom error page.
- Corrected category-based grouping logic to ensure saved courses were displayed under their correct categories.

Fusion ICS Project

November 2025 - Present

Full Stack Lead Software Developer

- Lead an **8-developer** team, driving backend architecture decisions and establishing standardized Git branching and code-review.
- Directed Agile sprint planning, PR review, aligning a **14-member** fullstack and design team through structured Scrum full syncs
- Designed relational database schema in Supabase, planning data models for establishments, users, community posts, and stamp
- Integrated automated testing into CI/CD pipelines using Github Actions to validate code and improve deployment reliability
- Created **20+** issues for pages, resolving conflicts, providing comments to code best practices and merging over **20** pull requests

AI@UCI

May 2025 - Present

Web Developer

- Co-launched the organization website, shipping 2 production pages supporting **300+** active members and weekly meetings

PROJECTS

SpoilSafe - Best Social Impact Hack, CutieHacks 2025 (120+ participants)

Jan 2025 - Jan 2025

Express.js, PostgreSQL, AWS S3, Gemini OCR

- Built a food-waste reduction application that extracts expiration dates from receipt images and notifies users of expiring items.
- Designed backend OCR pipeline using Google Gemini to convert raw receipt images into structured product metadata
- Achieved **92%+** extraction accuracy across diverse receipt formats through prompt tuning and post-processing validation

DailyForge

December 2025 - Present

Next.js, TypeScript, PostgreSQL, Prisma, Supabase

- Deployed a full-stack habit tracking app to production using Next.js, TypeScript, PostgreSQL, and Prisma ORM with Google OAuth
- Built timezone-aware streak engine, and a GitHub-style contribution heatmap across **5** REST API endpoints, **75+** beta users
- Created GitHub-style contribution heatmap displaying **16** weeks of daily habit completion history, with green completion for a day
- Designed a normalized PostgreSQL schema with **5** relational tables supporting per-user habit isolation and daily check-ins
