EDUCATION

University of California, San Diego

Master of Science in Data Science

La Jolla, CA

Expected 2026

University of California, San Diego

Bachelor of Science in Math - Computer Science, Minor in Finance

La Jolla, CA

2025

- **Coursework:** Data Structures, Algorithms, Programming Languages, Networking, Software Engineering, Machine Learning, Deep Learning, Quantum gates and algorithm, Business Finance, Bioinfo, Data Analysis

EXPERIENCE

NodeTree Inc.

Backend Engineer & Product Design Intern - Agentic System

Seattle, WA

Jun. 2025 – Sept. 2025

- Architected **tool-calling agents** and **memory management systems** using **FastAPI**, **pgvector**, and **LangChain**, enabling **5x faster decision-making** for users
- Designed and implemented **RAG strategies** for context-aware AI reasoning over large-scale operational data
- Built microservices architecture with **Docker** containers and deployed on **AWS** with **50% cost reduction**
- Optimized **real-time data processing** pipelines reducing latency from minutes to seconds for critical operations

Cybrook llc.

Full-Stack Software Engineer intern - Quant Trading Platform

Suzhou, Jiangsu

July. 2024 – Sept. 2024

- Developed **agentic quantitative strategies** using **LangChain** and **LangGraph** for dynamic multi-step reasoning, generating **75% higher alphas** than traditional models
- Built **real-time data dashboard** using **React** and **TypeScript** for visualizing trading patterns and metrics
- Engineered **tool-calling systems** with chain-of-alphas architecture reducing strategy development time **by 80%**
- Implemented **context engineering** solutions for handling complex reasoning over financial data streams
- Designed **event-driven** architecture supporting **100+ concurrent strategies** with zero data loss

Goosh Inc.

Software Engineer - E-commerce Platform

City of Industry, CA

Sept. 2022 – Sept. 2023

- Conducted comprehensive data analysis using **Python** and **MySQL** supporting strategic decision-making, improving efficiency **by 20%**
- Initiated data mining project with **web scraping** and **automation scripts** identifying potential customers, generating **\$80k+ in sales within first year**
- Developed automation tools using **Python** and **Selenium** streamlining workflows, **increasing productivity by 50%** across departments
- Maintained corporate websites with **React**, **Typescript** and **FastAPI** serving **10,000+ users** nationwide

PROJECTS

Project Up | Founder, Full Stack Developer - AI Project Manager

Sept. 2024 - Present

- Built full-stack platform using **React.js**, **Golang**, and **PostgreSQL** for scalable architecture
- Engineered **context engineering** system with **LangChain**, **LangGraph** for stateful multi-agent orchestration
- Implemented **RAG pipeline** with vector embeddings and **memory management** for persistent context across sessions
- Developed **multi-step reasoning** workflows with **short-term and long-term memory** stores enabling agents to handle **complex 10+ step planning tasks**
- Built **tool-calling agents** with dynamic context management for autonomous decision-making and task execution
- Deployed **microservices** on **AWS (EC2, S3, RDS)** with **OAuth2** authentication, achieving **sub-second response times**

TECHNICAL SKILLS

Skills: Python, Golang, Java, Shell, SQL, JavaScript, HTML/CSS, FastAPI, Gin, React.js, Typescript, Git, Docker, Kubernetes, Nginx, Pandas, NumPy, Matplotlib, Selenium, Tensorflow, Qiskit, MCP, LangChain, Langgraph, Postgres SQL, Mongo DB, RAG, AWS
