EDUCATION

University of California, San Diego

September 2024 - June, 2027(Expected)

Bachelors of Science, Data Science

La Jolla, CA

- **GPA: 3.76/4.0**
- **Relevant Coursework:** Data Structures and Algorithms, Statistical Methods, Data Analysis and Inference
- Data Science Student Society (DS3) member (2024-present)
- Association for Computing Machinery (ACM) member (2024-present)
- Minor in Cognitive Science (specialization in Machine Learning)

WORK EXPERIENCE

Poke Koma

Dec. 2022 – Aug. 2024

Team Member

Alameda, CA

- Handled daily financial transactions accurately and efficiently, processing hundreds of customer orders per shift in a fast-paced environment while resolving issues quickly and professionally.
- Trained new team members on service standards, food preparation, and safety protocols to uphold quality.
- Monitored inventory, restocked ingredients, and maintained cleanliness to meet health and safety regulations.

Alameda Recreation and Park Department (Aquatics Division)

May 2022 – Dec. 2022

Lifeguard and Swim Instructor

Alameda, CA

- Led swim lessons for groups of 1–12 students of all ages and proficiency levels, tailoring instruction to individual needs and fostering skill progression.
- Monitored and ensured the safety of 200+ daily participants in both instructional and open-swim settings.
- Worked collaboratively with a 50-member aquatics team to coordinate classes, maintain facility standards, and support public events.

Projects

Student Grade Analysis & Visualization — Data Analysis Project

- Processed and analyzed academic records (~500 students) using a weighted grading scheme incorporating lateness penalties, grace periods, and dropping lowest-score for target assignments.
- Automated grade calculation pipelines, applied syllabus-specific rules, and computed final scores with redemption adjustments.
- Visualized student performance trends through heatmaps, identifying section-level improvement patterns and grade distributions.

[Power Outage Analysis](#) — Data Analysis Project

- Analyzed 1,500+ major U.S. power outages (2000–2016) using Python, conducting data cleaning, EDA, missingness analysis, and hypothesis testing to identify drivers of outage duration and regional disparities.
- Built and evaluated regression models (Ridge, GAM, Random Forest, CatBoost) to predict outage duration from temporal, geographic, climate, and economic features
- Applied statistical validation and fairness analysis, using permutation tests and group-based RMSE comparisons to show severe-weather outages last significantly longer while model performance remained equitable across income levels.

Blockography.AI — ACM Hackathon

- Developed an image classification model in PyTorch to predict about 50 Minecraft biomes from screenshots, training on ~1,000 labeled images and achieving ~85% accuracy.
- Designed an end-to-end pipeline including image-to-tensor conversion, data augmentation (noise injection), training loops, and evaluation metrics.

CERTIFICATIONS, SKILLS & INTERESTS

- **Languages:** Python, Java, C++, R
- **Technologies:** VSCode, Github/Git, Jupyter Notebook
- **Frameworks:** Pandas, NumPy, scikit-learn, Seaborn, Matplotlib, Plotly, PyTorch
