EDUCATION

University of California San Diego

B.S. Computer Science

San Diego, CA

Exp. Graduation 2028

EXPERIENCE

IT Support Volunteer

La Casa del Sol

June 2025 - August 2025

San Diego, CA

- Diagnosed hardware issues on recycled laptops obtained through community donations.
- Repaired systems using salvaged components and replacement parts purchased with church-donated funds.
- Reinstalled operating systems and performed basic system configuration prior to deployment.
- Prepared refurbished laptops for donation to underprivileged students through a partner church in Mexico.

Chick-Fil-A

Front of House Team Member

April 2022 - December 2024

San Diego, CA

- Followed store procedures and safety rules during high-volume shifts.
- Worked with a team to serve customers and handle transactions accurately.
- Communicated clearly with customers to understand requests and resolve issues.
- Remained calm and professional when handling complaints or high-pressure situations.

Dicks Sporting Goods

Team Sports Team Member

June 2025 - September 2025

San Diego, CA

- Assisted customers with selecting sports equipment by understanding product specifications and use cases.
- Maintained accurate inventory organization and ensured proper stocking of team sports merchandise.
- Worked collaboratively with team members to manage high-traffic periods and meet customer needs efficiently.
- Followed store procedures for merchandise handling, safety, and loss prevention.

PROJECTS

Network Security Lab | Linux, Wireshark

- Analyzed network traffic to identify anomalies and potential security issues.

Python Port Scanner | Python, TCP/IP, Sockets

- Developed a Python-based TCP port scanner using socket programming to detect open ports on target hosts.
- Validated user input for IP addresses and domain names with DNS resolution support.
- Scanned user-defined port ranges with configurable timeouts to identify available network services.

Compliance Autofill Engine (CAfE) | Python, FastAPI, AWS Bedrock, LLMs, React

January 2026

- Built a full-stack AI-assisted system using FastAPI and AWS Bedrock that transforms advisor meeting notes and client profiles into structured, audit-ready compliance documentation, reducing manual write-up time from 20 minutes to 3.
- Implemented document ingestion, retrieval over compliance guidance, and LLM-driven structured JSON generation with post-processing and human-in-the-loop validation to improve reliability and consistency across records.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, SQL (Postgres), Bash, JavaScript

Networking & Security: TCP/IP, DNS, Port Scanning, Wireshark

Operating Systems: Linux/Unix, Windows

Cloud & DevOps: AWS, Google Cloud Platform, Docker, Kubernetes, CI/CD, Git/GitHub

Frameworks & Libraries: FastAPI, React, Node.js, JUnit, pandas, NumPy, Matplotlib
