EDUCATION

California State University, Bakersfield

Bachelor of Science in Computer Science

September 2024 – Expected December 2026

Bakersfield, California

California State University, Bakersfield

Bachelor of Science in Biological Sciences, Concentration in Biotechnology

September 2022 – May 2024

Bakersfield, California

Bakersfield College

Associates of Science for Transfer in Biology

August 2018 – May 2022

Bakersfield, California

EXPERIENCE

California State University, Bakersfield

Instructional Student Assistant

January 2025 – Present

Bakersfield, California

- Support **30+** students in Programming I and Software Engineering courses, reinforcing foundational programming concepts and advanced software development practices (Agile, JUnit, Jenkins)
- Mentor students on Version Control Systems (VCS) and branch policies, and delivered a lecture on Dependency Injection (DI), enhancing collaborative workflows and software maintainability
- Assist students in data structures and algorithms during tutoring sessions, boosting attending students' exam scores by **10%**

Aethor Systems

Software Engineering Intern

June 2025 – September 2025

Mojave, California

- Constructed a closed-loop liquid cooling system using **4** analog thermistors, **2** fans and a pump for thermal regulation of defense equipment
- Implemented a universal asynchronous receiver-transmitter (UART) debug logger to capture and track sensor readings in real-time, improving visibility into system performance and aiding rapid troubleshooting
- Applied the Steinhart-Hart equation in C++ to linearize coolant thermistor readings within a temperature range of **-40°C to 105°C**, improving accuracy for engine diagnostics

Grimmway Farms

Data Analyst Intern

May 2022 – December 2022

Bakersfield, California

- Ported legacy carrot measuring programs from Visual Basic .NET to C#, preventing deprecation and ensuring long-term maintainability
- Integrated Tierra Telemetrics API tractor field time and fuel usage metrics with PowerBI, providing management with real-time reports
- Identified a **31%** reduction in operational costs per tractor with the Wilcox Eliminator, leading to the acquisition of **three** additional units valued at **\$1M** each

PROJECTS

PacketBlocks | Guice, Caffeine

- Designed a client-side Java plugin, improving server runtime performance by a factor of **16.8x** at **100k** instances
- Created a batch write-back repository layer, leading to a reduction of **0.5** ticks per second (TPS) under load, improving write speed using internal APIs by **20x**
- Documented and released the public API on Maven Central, with support for over **10** model attributes

Flappy Bird Multiplayer Clone | TypeScript, Vue, Socket.IO, Node, Express

- Authored a real-time multiplayer web game supporting up to **8** concurrent users per session with WebSockets for client-server communication
- Designed REST API endpoints for user management and registration with authentication middleware
- Enforced server-side validation as the authoritative source of truth, preventing cheating and ensuring game integrity through rigorous packet validation

CERTIFICATIONS

AWS Certified Cloud Associate Badge 2025
