Education

University of California San Diego

B.S. in Data Science

Expected Grad: March 2027

La Jolla, California

Relevant Coursework

- Machine Learning
- Data Mining
- Data Management
- Linear Algebra
- Artificial Intelligence
- Data Structures
- Differential Equations
- Econometrics

Experience

Kaiser Permanente | *Excel, Tableau, Power BI*

June 2025 – Present

Data Analytics Intern

Remote

- Analyzed Labor & Trust's budget spending data using **Excel**, improving budget allocation by **20%**.
- Produced bi-weekly reports tracking membership, financial, and group renewals for internal stakeholders.
- Completed ad hoc data requests by pulling, cleaning, and validating data from internal systems such as SalesConnect.
- Created data visualizations for executives, including business performance reviews and consultant/broker presentations.

Eclipse Analytics

April 2025 – Present

Data Journalist

La Jolla, California

- Writing compelling articles about sports using data and incorporating visualizations with **Tableau**.
- Link: <https://www.eclipseanalytics.org/articles/nil-and-the-transfer-portal-how-ncaa-stars-are-finding-their-stride>

Projects

Electricity Demand | *Pandas, Scikit-learn, Seaborn*

November 2025 – December 2025

- Built a 3-state categorical **HMM** to classify hourly California electricity demand using load and price data.
- Discretized continuous time-series data into a joint categorical observation space for **EM-based HMM** training.
- Designed a train-test evaluation framework achieving **81%** accuracy, outperforming a majority-class baseline.
- Interpreted state separation and transition dynamics using Jensen-Shannon divergence and transition matrices.

Recipes & Ratings | *Pandas, Matplotlib, Scikit-learn, Plotly*

May 2025 – June 2025

- Cleaned dataset with over **80,000** entries and parsed complex nutritional strings into numeric features using **Pandas**.
- Conducted permutation tests and seasonal trend analysis to identify correlations between seasons and macronutrients.
- Developed a **Decision Tree Regressor** with a 0.96 R-squared score to predict caloric values, optimized via **GridSearchCV**.
- Executed a fairness audit and missingness analysis (MAR) to ensure model consistency and data integrity.

March Madness Analysis & Predictor | *Pandas, Matplotlib, Scikit-learn, Seaborn*

February 2025 – March 2025

- Processed historical NCAA data and 2025 stats using **Pandas**, performing data cleaning and feature engineering.
- Conducted exploratory data analysis to identify key indicators for tournament success such as offensive rebound rate.
- Developed a **Random Forest Classifier** to predict tournament winner, utilizing **SMOTE** to handle class imbalances.
- Deployed the predictive model to identify the 2025 March Madness Champion based on historical performance patterns.

Social Media & Mental Health | *Python, Pandas, Seaborn, Jupyter, Git*

January 2025 – March 2025

- Worked in a team of **5** to explore effect of social media on college students' mental health, using **Git** for version control.
- Cleaned and standardized **2** datasets with over **1,200** entries using **Pandas** to prepare for data analysis and modeling.
- Performed exploratory data analysis to analyze relationship between mental health variables and social media usage.
- Built a **multiple regression** model using **Ordinary Least Squares (OLS)** to assess the impact of social media usage and other predictors on loneliness, anxiety, and depression.

Technical Skills

Languages: Python, SQL (MySQL), Java, C++, C, HTML/CSS

Tools: Jupyter, Tableau, Power BI, Excel (Pivot Tables, XLOOKUP), Git, Github, VS Code, PyCharm, Eclipse, LaTeX

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, PyTorch
