 San Jose, USA

SUMMARY

- 1.5+ years of experience developing and maintaining web applications using Java, Node.js on Linux environments. Hands-on experience with REST API development, MongoDB, Redis, and microservices architecture for scalable systems.

EDUCATION

Master of Science in Computer Software Engineering - San Jose State University **Aug 2024 - May 2026**
Coursework: Enterprise Distributed Systems, Software Systems Engineering, Enterprise Software Platforms, Data Mining

Bachelor of Technology in Computer Engineering - Dharmsinh Desai University **Jul 2019 - May 2023**
Coursework: Data Structures & Algorithms, Database System, Operating System, Computer Networks, Machine Learning

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, C++
Web Technologies: Spring Boot, Django, React, Node, Express.js, Next.js Redux, REST APIs, HTML, Tailwind CSS
Database: Postgre, MySQL, NoSQL, Cassandra, MongoDB, DynamoDB, Redis
Other Technologies: Linux, Git, Docker, Kubernetes, Jenkins, AWS (S3, EC2, Lambda), Kafka, TensorFlow, Pandas

WORK EXPERIENCE

Software Engineer Intern - UL Solutions **May 2025 – Aug 2025**
Apache Kafka, Flink, Spring Boot, GraphQL, Docker, Kubernetes, AWS, PostgreSQL Fremont, CA

- Designed and implemented a real-time distributed data processing system to ingest and analyze high-volume telemetry from embedded devices using **Kafka** and **Flink**, enabling near real-time anomaly detection and device health monitoring.
- Built and exposed scalable backend APIs using **Spring Boot** and **GraphQL** to serve processed insights to internal dashboards, optimizing query paths and reducing end-to-end data access latency by 35%.
- Deployed containerized microservices on **AWS EKS** with automated CI/CD, implementing fault-tolerant stream processing, service scaling, and observability to support reliable operation under production workloads.

Software Development Engineer - ProdSmiths Technology Solutions Pvt Ltd. **Jul 2023 – Jul 2024**
Spring Boot, React.js, Django, Docker, Redis, PostgreSQL, AWS, Jenkins, JUnit Mumbai, India

- Developed backend services for an enterprise analytics platform that transformed complex e-commerce and financial data into actionable business insights, integrating optimized SQL pipelines with AI-based analysis using **OpenAI GPT-4**.
- Implemented key features for a debt collection system, including case workflows, payout processing, and bulk data operations, contributing to scalable and maintainable microservice-based applications.
- Improved application reliability through comprehensive unit and integration testing (92% coverage) and established CI/CD pipelines with Docker and Jenkins for automated testing and deployment.

Research and Development Intern - Indian Space Research Organisation (ISRO) **Dec 2022 – Apr 2023**
Python, Shell Scripting, HPC, Data Processing Ahmedabad, India

- Developed high-performance Python data processing pipelines for large-scale scientific datasets, optimizing batch execution and parallel processing on HPC systems to reduce computation time by 20% and improve model accuracy by 13%.

PROJECTS

Intelligent Traffic Spike Mitigation & Auto-Throttling System **Sep 2025 – Nov 2025**

- Designed and implemented a cloud-native traffic protection system to detect real-time request spikes and apply adaptive throttling, ensuring system stability and high availability under bursty workloads.
- Built edge-level rate limiting using **AWS API Gateway** and **Lambda** with sliding-window and token-bucket strategies, dynamically tuning thresholds based on live metrics from **CloudWatch**.
- Enabled graceful degradation by queuing excess requests via **AWS SQS** and throttling data in **DynamoDB**.

AI-Powered Code Review Assistant | Python, Google ADK, Gemini AI, Cloud Run, Cloud SQL **Aug 2025 – Oct 2025**

- Designed and built an intelligent multi-agent system to analyze Python code using AST parsing, style validation, and automated test execution, generating structured review feedback and prioritized fix recommendations.
- Implemented an iterative fix pipeline that applies AI-generated code corrections with validation loops, re-running tests and style checks to ensure correctness and measurable quality improvements.
- Deployed the system on **Cloud Run** with persistent state in **Cloud SQL**, integrating execution tracing and logging to monitor agent workflows, fix outcomes, and system performance.

Productivity & Wellness Analytics Platform | React.js, Spring Boot, MongoDB, Apache Kafka **Sep 2024 - Dec 2024**

- Developed an end-to-end AI-driven platform for tracking employee productivity metrics and correlating them with wellness data to provide personalized interventions to enhance well-being and productivity across teams.
- Implemented Azure B2C for secure authentication, Docker and Kubernetes for containerization and orchestration, with NGINX for efficient load balancing and routing.
