EDUCATION

Master of Science, Software Engineering - Data Science Specialization (San Jose State University, CA, USA)	May 2026
<u>Coursework:</u> Data Mining, Machine Learning, Deep Learning, Software Systems Engineering, Enterprise Software Platforms, Web UI Design, Software Engineering Processes	GPA – 3.7 / 4.0
Bachelor of Engineering, Computer Engineering (L.J. Institute of Eng. & Technology, GJ, India)	May 2023
<u>Coursework:</u> C, Python, Data Structures & Algorithms, Database Management Systems, Machine Learning, Artificial Intelligence, Web Programming, Information Security, Computer Networks.	GPA – 4.0 / 4.0

SKILLS

Programming & APIs: Python, JavaScript (ES6+), TypeScript, C, Java, PHP, Node.js, REST APIs
Frontend: React.js, Next.js, HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap, jQuery, OWL
Database Management: PostgreSQL, MySQL, SQL, MongoDB
Testing & DevOps: Jest, QUnit, Pytest, unit testing, integration testing, Hoot, CI/CD, AWS, Docker
Data Science & ML: Pandas, NumPy, scikit-learn, XGBoost, TensorFlow, PyTorch, Matplotlib, model evaluation
Data Engineering & LLMs: ETL pipelines, Tableau, vector embeddings, RAG, similarity search, anomaly detection
Tools & Collaboration: GitHub, Bitbucket, Jira, Asana, Slack, Postman, Agile, Scrum, Microsoft Office, Google Workspace

WORK EXPERIENCE

Software Engineer Intern Rooteam (Brooklyn, NY, US)	May 2025 - Aug 2025
- Fixed a long-standing checkout flow race condition causing incorrect pricing, totals, and quantities, directly impacting customer trust. - Reworked frontend lifecycle and DOM state handling so calculations ran only after UI stabilization, reducing user-facing errors and complaints. - Refactored a product configuration flow to handle edge cases including double-clicks, resizes, and slow network conditions. - Designed and built a backend cron-based scheduling system with retries, readiness checks, and job locking to stabilize failing, concurrent data import pipelines. - Reduced recurring production sync-errors by restructuring third-party API integration flows for Asana and Harvest connectors to support subtasks, custom fields, and aligned billing and timesheet tracking. - Conducted technical code reviews with critical testing, and introduced commit/coding standards, raising code quality and improving collaboration across distributed teams in the U.S. and India.	
Software Developer Odoo IN Pvt. Ltd (Gandhinagar, GJ, India)	Jan 2023 - Jul 2024
- Shipped 30+ features for Odoo Spreadsheet (Google Sheets and Excel-like web-app) used by 15M+ users, improving data visualization and manipulation through Agile sprints. - Developed end-to-end modules and extended features across Odoo's marketing apps (such as CRM, SMS, Documents, Events, Mail, Social) in a shared production codebase with CI/CD pipelines. - Debugged and resolved complex full-stack issues across frontend, backend, and PostgreSQL layers, handling upgrade bugs, performance bottlenecks, and stability defects. - Improved Documents module performance by ~20% through performance analysis, code optimization, and refactoring. - Contributed to feature design discussions and version upgrade migrations within Odoo's modular ERP architecture.	
ReactJS Intern Elsner Technologies Pvt. Ltd (Ahmedabad, GJ, India)	Jun 2022 - Jul 2022
Built two React applications (TrackEx and Food-Genie) with REST API integration, implementing core UI flows using React components, JavaScript (ES6), hooks, routing, state management, and JSX.	

PROJECT EXPERIENCE

StratIQ: Multi-Agent AI Decision Platform	Aug 2025 - Jan 2026
- Engineered a multi-agent orchestration pipeline (Analyst, Researcher, Planner, Arbiter) for structured decision workflows. - Built a RAG system using vector embeddings to combine structured KPIs with unstructured documents. - Implemented anomaly detection modules for customer churn and employee attrition risk. - Designed evaluation experiments comparing baseline vs retrieval-enhanced LLM outputs.	
Restaurant Finder - Full-Stack Web Application	Sept 2024 - Dec 2024
- Built a Yelp-like restaurant discovery platform with search, reviews, ratings, business dashboards, and admin tools. - Implemented a React frontend with Google Maps API integration for location-based search and filtering, along with a Node.js + MongoDB backend with secure role-based access for users, business owners, and administrators. - Deployed it on AWS using ECS with load balancing, auto-scaling, and S3, and designed modular REST APIs for scalability and maintainability.
