AI Engineer with hands-on experience building production voice AI and LLM systems. Built a real-time voice scheduling system using Groq for low-latency inference and Vapi.ai for voice orchestration, deployed on AWS. Experienced in LLM evaluation pipelines, behavioral testing, and prompt design. Python-first, comfortable with ambiguity, and focused on systems that work reliably in production.

EDUCATION

Bachelor of Science in Computer Science **May 2026**

Arizona State University **Tempe, Arizona**

Relevant Coursework: Data Structures & Algorithms, Operating Systems,

Distributed Software Development, Computer Network Security, Statistical Machine Learning,

Applied Linear Algebra, Probability & Statistics

SKILLS

Languages: Python, C++, Java, SQL, Linux, Bash/Shell scripting

Frontend: React.js, TypeScript

Backend & APIs: FastAPI, Flask, Django, REST APIs, Groq, Vapi.ai

Systems & Infrastructure: Distributed systems, async processing, Docker, Redis, PostgreSQL, CI/CD

Databases & Cloud: MongoDB, MySQL, AWS

Machine Learning & AI: Scikit-learn, XGBoost, LightGBM, TensorFlow, Anthropic SDK, embeddings, prompt engineering, red-team evaluation

PROJECTS

Redline (Agent Safety Evaluation Platform) | Python, FastAPI, Postgres, Redis, Docker, RQ, LLM APIs [link](#)

- Built a scalable distributed system for LLM evaluation using FastAPI, Redis/RQ, and PostgreSQL, enabling asynchronous processing of experiments.
- Designed backend architecture for reproducible evaluation pipelines with persistent trace logging.
- Implemented automated safety metrics (hallucination, refusal accuracy, compliance), improving reliability of LLM outputs.
- Engineered secure and fault-tolerant system with prompt-injection detection and controlled execution environments.

- Developed REST APIs for orchestrating evaluation workflows and system interactions.

VoiceAI Medical | *Node.js, TypeScript, React, Redis, Groq, Vapi.ai, AWS* [link](#)

- Built a production-grade full-stack system for AI-driven patient scheduling, improving user experience through real-time chat and voice workflows
- Developed responsive frontend interfaces using React and TypeScript for real-time interaction.
- Designed backend services to ensure reliable appointment matching and reduce scheduling errors.
- Implemented hallucination-safe architecture using backend validation independent of LLM outputs.
- Deployed on AWS EC2 with Nginx, enabling scalable streaming and session persistence via Redis.

Constitutional Safety Agent | *Python, FastAPI, React, scikit-learn, Docker, LLM APIs* [link](#)

- Built a full-stack AI application using FastAPI and React that enforces safety rules on LLM responses with classifier-based gating and configurable policies.
- Implemented classifier-based pre/post generation gating with configurable harm thresholds and enforced refusal logic.
- Designed model-independent rule engine to prevent jailbreak overrides and enforce non-negotiable safety constraints.
- Integrated red-team evaluation pipeline with structured trace logging and safety dashboard benchmarking.

EXPERIENCE

Teleoperation Data Collection Associate March 2026 - Present

Objectways Technologies LLC **Phoenix, Arizona**

- Operate Trossen robotic systems via teleoperation to collect structured training data for physical AI and embodied intelligence models.
- Clean and preprocess raw teleoperation datasets to ensure labeling quality and consistency for downstream model training
- Contribute to model training pipelines by preparing high-quality demonstration data used to improve robot learning performance

Research Aide October 2023 - May 2025

ASU School Of Earth & Space Exploration **Tempe, Arizona**

- Developed interactive virtual field modules for NSF-funded WORM Portal, improving user engagement
- Collaborated with interdisciplinary teams to ensure system usability and content accuracy
- Integrated structured data pipelines and UX improvements for scalable educational delivery

Software Development Intern June 2023 - August 2023
Hindustan Aeronautics Limited

India

- Built and optimized internal web dashboards for real-time aerospace telemetry monitoring
- Improved system performance and load efficiency through modular frontend components
- Collaborated with engineering teams to ensure data accuracy and reliability in production systems
