PROFILE

Economics major with hands-on experience in econometric modeling, statistical inference, and regression analysis. Building software development skills through a Computer Science minor, with proficiency in Python, JavaScript, and collaborative Git workflows. Combines rigorous quantitative training — including linear algebra, probability theory, and hypothesis testing — with practical programming ability to analyze and interpret complex datasets.

EDUCATION

University of California, San Diego

B.A. Economics | Minor in Computer Science

San Diego, CA

December 2027

Relevant Coursework: Econometrics A (A), Econometrics B (in progress), Linear Algebra (A-), Data Analytics for Social Sciences

EXPERIENCE

Software Developer

Fall 2025 – Present

CS&S — Open Source Cohort, UC San Diego

San Diego, CA

- Developed and deployed website using HTML, CSS, and JavaScript, applying responsive design principles and component-based layout structures
- Participated in structured peer code reviews, identifying bugs and proposing refactors to improve code clarity and maintainability
- Applied iterative development cycles — planning, building, testing, and revising projects based on team feedback and functional requirements

COURSEWORK

Econometrics A (ECON 120A)

Probability and Statistics in Economics

- Studied probability and statistics as applied to economic contexts, including probability theory, sampling theory, and statistical inference
- Applied hypothesis testing and confidence interval construction to evaluate economic claims and model uncertainty
- Built foundational skills in quantitative reasoning that underpin regression modeling, econometric methods, and data-driven economic analysis

Linear Algebra (MATH 18)

Matrix Computations and Vector Spaces

- Studied systems of linear equations, matrix operations, determinants, vector spaces, and eigenvalues/eigenvectors
- Applied matrix decomposition techniques and linear transformations to solve computational problems
- Developed foundational understanding of linear algebra concepts critical to econometrics, data science, and machine learning applications

TECHNICAL SKILLS

Languages: Python, HTML, CSS, JavaScript, SQL

Tools: Git, GitHub, Jupyter Notebook, VS Code

Quantitative: Econometrics, Statistical Inference, Regression Analysis, Matrix Computations, Probability Theory

Finance & Econ: Financial Modeling, Macroeconomic Analysis, Market Analysis, Economic Data Interpretation
