EDUCATION

University of California - San Diego - Bachelors of Science, Computer Science, GPA (3.6) 2024-2028
Relevant Coursework: Data Structures & Algorithms, Computer Systems, Discrete Mathematics I & II

TECHNICAL SKILLS

Front End | React, NextJS, Javascript, TypeScript, NodeJS, HTML, CSS
Back End | Java, C, C++, Python, ExpressJS
Developer Tools | Git, npm

EXPERIENCE & PROJECTS

Full-Stack Engineer | LocusAI (IrvineHacks) 2026

AI-powered neighborhood livability analysis platform React | TailwindCSS | Mapbox GL API | Groq API | Express.js | Vercel

- Integrated **Mapbox GL** into the core application to deliver interactive geospatial visualization for real-time neighborhood exploration
- Developed key frontend systems including a **dynamic search interface**, **personalization control panel**, and **live scoring dashboard** to surface composite livability metrics and transparency of contributing factors
- Implemented **AI-powered natural language processing** allowing users to describe preferences in plain English, translating them into weighted livability factors and generating explainable score summaries
- Led a **4-person engineering team** through rapid prototyping and iteration, delivering a functional full-stack application within a **36-hour hackathon sprint**

Full-Stack Engineer | News Digest (UCSD Startup Incubator Hackathon) 2025

AI-powered extension converting long-form articles into digestible summaries Next.js | OpenAI API | Chrome Extension

- Integrated **OpenAI API** to summarize live webpage content, reducing article length by **~80%**
- Built dynamic UI transitions that convert webpages into simplified reading views for faster information consumption
- Designed accessibility-focused features including adjustable typography and simplified layouts for users with ADHD and dyslexia

Front-End Engineer | EcoForge (MIT Energy & Climate Hackathon) 2025

B2B procurement recommendation platform for steel sourcing optimization React | Vite | TailwindCSS | FastAPI | TypeScript

- Architected frontend system using **React + Vite** for fast rendering and scalable UI development
- Built core interfaces for location, volume, and procurement preference inputs designed for non-technical B2B users
- Integrated geolocation APIs and improved regional accuracy through debugging and edge-case handling
- Implemented structured **JSON-based data flow** connecting frontend, recommendation engine, and backend endpoints

Front-End Engineer | Swipestyle 2024

Swipe-based fashion discovery and engagement platform React | TypeScript | TailwindCSS

- Designed UI/UX workflows in Figma and implemented responsive interfaces using React and Tailwind
- Increased development efficiency by **30%** through reusable component architecture
- Built swipe interaction systems contributing to a **15% increase in user engagement**

Mobile Developer | Inga (DiamondHacks Winner) 2024

AI-powered application simplifying complex medical documents React Native | Supabase | OpenAI API

- Developed AI-driven features to simplify and summarize medical documentation for improved accessibility
- Contributed to prompt engineering and backend schema design supporting structured AI outputs
- Project recognized with award for **medical safety innovation**
