EDUCATION

B.S. Cognitive Science, Specialization in Machine Learning and Neural Computation

University of California, San Diego (UCSD), La Jolla, CA

Minor: Entrepreneurship and Innovation

Relevant Coursework: Data Science (COGS 108), Deep Learning (COGS 181), Human-Computer Interaction and Design (COGS 187A)

EXPERIENCE

Product Manager

Non-Profit Consulting, Product Management Club, UCSD

- Drive marketing, branding, and growth strategy for a partnered non-profit, owning the product roadmap from ideation to execution
- Coordinate cross-functional team efforts to expand audience reach and improve engagement through data-informed decisions
- Serve as the bridge between stakeholder needs and team deliverables, translating goals into actionable project milestones

PROJECTS

Emotion Analysis of Reddit During Election Season

COGS 108 - Data Science

University of California, San Diego

- Collected and processed Reddit data across political subreddits to analyze emotional sentiment trends during the 2024 U.S. election cycle
- Applied NLP and data visualization techniques to identify shifts in community sentiment, surfacing insights about how major political events drive emotional responses online
- Delivered a full analysis report with reproducible Python notebooks; received an A in the course

AI-Powered Scheduling App

COGS 181 - Deep Learning

University of California, San Diego

- Designed and built a fully functional AI scheduling assistant in a single day, integrating deep learning concepts to handle dynamic user input and task prioritization
- Wrote complete technical documentation covering architecture decisions, model design, and usage instructions
- Demonstrated ability to ship fast under constraints while maintaining code clarity and product thinking

HiFi Mobile App Prototype - UX Design

COGS 187A - Interaction Design

University of California, San Diego

- Collaborated with a team to design a high-fidelity mobile app prototype from scratch, leading all prototyping work in Figma while teammates handled user research
- Translated user research findings into intuitive, polished UI flows that addressed real user pain points
- Received an A+ in the course; prototype demonstrated strong command of UX principles and design systems

SKILLS

Languages and Tools: Python, Figma

Data and Analysis: Data visualization, sentiment analysis, NLP concepts, exploratory data analysis

Design: High-fidelity prototyping, UX research synthesis, design systems, user-centered design

Product: Roadmap planning, stakeholder communication, cross-functional collaboration

Interests: AI products, startup strategy, product growth
