TN/OPT/CPT - Canadian Citizen

EDUCATION

University of California, San Diego

Bachelor of Science in Computer Science

San Diego, California

Expected June 2027

TECHNICAL SKILLS

Classes: Discrete Math, Software Engineering, OOP, DSA, Algorithm Design, System Design, Machine Learning

Programming Languages: Python, TypeScript, JavaScript, HTML, CSS, SQL, C/C++

Libraries and Frameworks: Nextjs, Nodejs, FastAPI, Pydantic, Flask, PyTorch, Tensorflow, NumPy, Pandas, React

Dev Tools & Platforms: GCP, AWS Cloud, GitHub, Git, Redis, GraphQL, ADK, LangGraph, LLM Tuning, LangChain, n8n, Pinecone, Supabase, Docker, Postgres, Vercel, VertexAI, RESTful APIs

WORK EXPERIENCE

AI/ML Engineer Co-Op @ Crediling

AI Fintech Startup (B2B Lending) — On-site

June 2025 – Present

Palo Alto, CA & Singapore

- Took part in **Google AI CTO** program—completed training at Google Singapore on the latest AI/ML tools and currently collaborating with Google's partners to integrate multi-agent systems into Crediling.ai's platform.
- Secured a **\$40,000** Bain & Company contract *as measured by* signed SOW and project kickoff, *by* working with cross-functional teams to develop robust **OCR** agents with schema-validated structured outputs via Pydantic for bank statements.
- Reduced document-parsing cost basis by **~99%** *as measured by* shifting from \$200/month + \$5/document SaaS to ~\$0.07/document, *by* implementing in-house OCR agents with structured-output schemas across diverse financial and bank documents.

Software Engineer Intern @ ManiKapital

Venture Capital Investment Firm (Finance Chatbot Development)

June 2024 – Sept 2024

Tokyo, Japan

- Fine-tuned a **Gemini** language model via **Vertex AI**, using a mix of real customer service data, synthetically generated queries, and internal finance documents to improve chatbot accuracy and relevance.
- Reduced human customer service interactions by up to **40%** through weekly rate analysis, allowing support staff to focus on external tasks like onboarding and outreach.
- Improved average chatbot response helpfulness by **74%**, based on internal user satisfaction surveys and testing benchmarks using sentiment scoring.

PROJECTS *(More on my GitHub)*

Automated Blood Test Analysis Platform - Contract work for Sheeba the Nutritionist

January 2026

- Engineered full-stack health analytics platform with AI-powered document intelligence pipeline using LLM-based OCR for medical PDF parsing and rule-based classification algorithms for functional blood chemistry analysis; automated extraction and categorization of 50+ biomarkers with gender-specific logic, eliminating 30 hours/month of manual Excel workflows and reducing human error by 100%.
- Deployed production-ready FastAPI backend with automated ETL pipeline processing medical PDFs, implementing algorithmic health indication logic and organ support recommendations; built scalable REST API with secure file handling, CORS protection, and ReportLab-based report generation, reducing analysis time from 2+ hours to under 2 minutes per patient.

E-Commerce Transaction Classification System - Crediling

January 2026

- Engineered hybrid ML classification system to automate business transaction categorization for loan applicants, evaluating 6+ algorithms (Random Forest, SVM, XGBoost) on 1,400+ samples; deployed scalable pipeline with TF-IDF vectorization (10,000 features) and intelligent business rules achieving 100% accuracy, enabling analysis of thousands of client transactions and reducing underwriting time by 90%.
- Automated revenue stream identification across major e-commerce platforms, enabling underwriters to rapidly assess client business performance and sales trends for loan decisioning; eliminated false positives on critical transactions through explainable classification logic, reducing manual analysis time from 10+ hours to minutes per applicant.
