EDUCATION

University of California, San Diego

Bachelor of Science in Math - Computer Science, Minor in Cognitive Science

San Diego, CA

Aug. 2023 - Present

WORK/INTERN EXPERIENCE

Technical Product Manager

Sep. 2025 - Present

Helpport AI, Inc

San Diego, CA

- Designed and implemented 6 work modes for WeChat/WeCom integration, including direct AI customer service and human-in-the-loop copilot modes, reducing customer service costs while maintaining response consistency.
- Built an enterprise WeChat + Dify AI customer service integration system using Python Flask, enabling automated 24/7 customer support with multi-turn conversation support and message encryption/decryption using official WeChat SDKs.
- Shipped a mobile summary to proposal flow in React, TypeScript, and Tailwind with selectable recommendations and a branded HTML export.
- Implemented reliable export on iPhone using a server-backed endpoint with an in-app preview and client fallbacks for WebViews.
- Improved code quality by fixing JSX and TypeScript issues, adding lightweight runtime checks, and documenting UX decisions and edge cases.
- Engaged with clients to capture business needs and designed app logic that aligned product functionality with user expectations.

Software Engineering Intern

Jan. 2026 - Present

Ioffer AI, Inc

Remote

- Worked on the full-stack login and organization flow to ensure the frontend behavior matches the backend org/subdomain routing.
- Implemented org-aware handling in the frontend (org context/state) so the correct organization experience is loaded after authentication.
- Refined organization selection behavior for multi-org users and improved consistency between API responses and UI navigation.
- Tested the workflow locally end-to-end, iterating on edge cases until the frontend matched the backend's expected routing and membership behavior.

Software Developer - Tech Lead

Aug. 2025 - Present

CSES - OpenSource

San Diego, CA

- Leading a cross-functional team of 6 developers to build a mentorship platform projected to support 1,200+ UCSD students and alumni for career guidance and networking. (Leadership)
- Built a CI/CD pipeline using GitHub Actions and Docker, reducing deployment time from 1 hour manual process to 15 minutes automated, while enforcing code review standards to maintain code quality.
- Expanded the automated test suite by adding unit and integration tests for core features, which increased overall test coverage by 30% and allowed the team to catch bugs earlier in the pipeline, reducing QA cycles.
- Optimized database queries and implemented MongoDB indexing strategies, reducing API response time by 40% for company search operations and improving pagination performance for large datasets.

PROJECTS

Moxi - AI-Powered Documentation Generator

- Independently developed an AI system that automatically generates and updates documentation for GitHub repositories using a custom fine-tuned model to reduce API costs.
- Built a complete ML pipeline architecture from data collection to model training (LoRA fine-tuning ready), implementing modular design with 5 independent pipelines.
- Designed and implemented a repository analysis system that detects project types and languages, supporting high-concurrency batch processing architecture for 50+ repositories.
- Deployed automated CI/CD pipeline using GitHub Actions with Docker, enabling one-click setup via Gradio web UI and automatic documentation updates on every code push, reducing manual documentation maintenance time by 90%.
- Optimized system performance by implementing caching mechanisms and asynchronous I/O, reducing average documentation generation time from 10 minutes to 1 minute per repository.

TECHNICAL SKILLS

Coding Languages: Java, Python, JavaScript, GoLang, C/C++

Framework: React, Vue, Node.js, Flask, RestfulAPI, Express, Golang Gin, OpenG
