SUMMARY

I'm a Computer Science sophomore at UIC actively transitioning into AI and Machine Learning. I'm focused on strengthening my programming and problem-solving fundamentals while building projects that help me understand how data-driven models work in real applications. I'm especially interested in gaining hands-on experience through coursework, personal projects, and opportunities that let me grow in ML concepts like model building, evaluation, and practical implementation.

EDUCATION

University of Illinois Chicago <i>Bachelor of Science in Computer Science</i> Cumulative GPA: 3.15/4.00	Chicago, USA May 2027
St. Gregorios Sr. Sec. School- Udaipur, Rajasthan. Cumulative GPA: 80.00/100	Udaipur, India March 2021

SKILLS / CERTIFICATIONS

Technical Skills: Python, C++, C, Discrete Mathematics
Software Proficiency: Microsoft Office Suite (Word, PowerPoint, Excel), Google Workspace (Docs, Sheets, Slides)

EXPERIENCE

Website Developer Intern <i>My Task</i>	Jaipur, Rajasthan May 2023 – August 2023
- Assisted in implementing responsive layouts with Bootstrap 5 and CSS Grid for four client websites, improving cross-device compatibility and reducing mobile rendering issues by 90%. - Supported performance optimization by configuring Webpack bundles and running Google Lighthouse audits, helping decrease initial pageload times by 45% and integrating 20+ client requests via GitHub. - Applied C++, C, and Python skills to create interactive site features, showing proficiency in core web development.	

COURSE PROJECT

CS-Financial Planning App <i>University of Illinois Chicago</i>	Nov 2024 - Dec 2024
- Developed: A comprehensive financial planning application in Python that visualizes monthly and yearly spending trends. - The app analyzes expenditure patterns to provide tailored budgeting suggestions and supports goal tracking. The project spans over 1,500 lines of code. - Showcased: Selected for display in program design class at UIC during the Fall 2023 semester, recognizing proficiency in coding and application development. - Incorporated: Utilized Turtle graphics, AI image generation, and the random module to enhance interactivity and visual appeal.
