Education

San Jose State University, San Jose, CA

Aug 2025 – May 2027

M.S. in Computer Science (Specialization: Machine Learning)

GPA: 3.9/4

Relevant Coursework: Data Structures, Machine Learning, Distributed computing, Big Data

Vignan Institute of Technology and Science, Guntur, India

Jul 2015 – May 2019

B.Tech in Computer Science

Skills

Languages: Python, C/C++, JavaScript, SQL

Front-End Technologies: HTML5, CSS3, JavaScript, React.js, Angular

Back-End Technologies: Python, FastAPI, Flask, Django, Java, Spring Boot, Node.js, RESTful APIs, SOAP, Bash Scripting

Databases: MySQL, PostgreSQL, MongoDB, SQL Server, Oracle, Redis, Cassandra, Elasticsearch, SQLite, Firebase

Cloud Platforms: AWS (S3, EMR, Lambda, DynamoDB, EventBridge)

DevOps & Tools: Docker, Kubernetes, Jenkins, Git, GitLab CI/CD, Linux, Apache Kafka, Airflow, Postman, Grafana, IntelliJ, VS Code, JIRA

Data & Infrastructure: ETL/ELT, Batch Data Pipelines, Schema Design (Star Schema, Snowflake, SCD Type 1/2), Apache Spark, Kafka

Machine Learning & AI: TensorFlow, PyTorch, Production ML Pipelines, Time-Series Forecasting, Regression, Clustering, Model Evaluation, LLM Fine-Tuning (LoRA), Retrieval-Augmented Generation (RAG)

Professional Experience

Course Recommendation Platform, Software Engineer ML, Capgemini

Aug 2023 – Feb 2024

- Built a **Python-based recommendation service** analyzing **10,000+ courses**, improving click-through rates by **22%** and recommendation accuracy by **18%** using Pandas and Scikit-learn.
- Implemented **CI/CD pipelines with GitLab CI** and containerized services using **Docker**, enabling automated testing and reliable deployments.
- Deployed a **serverless architecture on AWS Lambda** with **DynamoDB**, achieving **99.9% uptime** and consistent sub-**200ms** API response times via **Spring Boot REST APIs**.

Enterprise Resource Allocation System, Software Developer, Capgemini

Sep 2021 – Aug 2023

- Engineered a **Python-based skill-matching system** to allocate **2,000+ employee profiles** across projects using weighted scoring logic, reducing manual effort by **30%**.
- Designed **RESTful APIs using Flask** and **PostgreSQL** to manage allocation and status tracking across **500+ active projects**.
- Built **Jenkins-based CI/CD pipelines** with automated testing and Docker builds, and deployed services on **AWS EC2**, maintaining **99.7% API uptime**.

Data Analytics Platform Migration, Data Consultant, Capgemini

Jul 2019 – Sep 2021

- Supported an enterprise-scale migration from **Denodo** to **SAP HANA**, modernizing backend analytics infrastructure.
- Developed optimized **SQL transformations** and validation checks to ensure data consistency during migration.
- Delivered **Power BI dashboards** on SAP HANA datasets using SQL and DAX, improving report refresh and query performance by **20–25%**.

Academic Projects

Tiny Recursive Models for Reasoning Tasks – Research Associate

Feb 2026 – Present

- Replicating and extending **Tiny Recursive Models (TRM)** for parameter-efficient reasoning based on recent research literature.
- Implementing **recursive latent reasoning** and **deep supervision** in **PyTorch** to study generalization on structured reasoning tasks.
- Conducting **ablation studies** on recursion depth and training stability toward a research manuscript.

Distributed Publish-Subscribe Messaging System (Course Project)

Dec 2025

- Designed a **fault-tolerant distributed pub/sub system** with leader-replica architecture for ordered message delivery.
- Implemented brokers using **FastAPI**, gossip-based membership, **Bully leader election**, and deployed containerized clusters using **Docker** on **AWS EC2**.
