

Data Science student experience in EDA using Python, SQL, Tableau to identify data-driven insights. Familiar with core ML techniques such as regression, classification, ensemble models, and clustering. Interested in applying predictive modeling and statistical methods to develop reliable machine learning models.

SKILLS

Programming	Python, SQL
Libraries & Tools	pandas, NumPy, scikit-learn, Jupyter Notebook
Data Science & ML	EDA, regression, classification, ensemble models, clustering, feature engineering, model evaluation
Visualization & BI	Tableau, Power BI, Excel
Certificates	[UDEMY] 100 Days of Code: The Complete Python Pro Bootcamp

TECHNICAL EXPERIENCE

Data Platform Intern — Rocket BI	Feb 2024 — Sep 2024
<i>Projects and Contributions</i>	
• Data Platform QA and Tester	Feb 2024
– Test BI platform features and identify bugs to ensure data pipeline integrity	
– Identify UI/UX and data-quality bugs, develop structured documentation, and provide feedback to engineering teams	
– Focus on data dictionaries and detailed issue logs for improving customer experience.	
– Technology in use: SQL, Python, Enterprise BI Tools.	
• Data Analytics Dashboard	April 2024
– Build end-to-end ETL workflows: Extract raw data using SQL, transform the data via Python and load into BigQuery for analysis	
– Conduct exploratory data analysis to gain detailed insight across multiple departments such as marketing, Sales, and HR	
– Design interactive dashboards using Tableau/Power BI to visualize key elements, and communicate actionable core values.	
– Collaborate with product team to ensure dashboards aligned with business objectives	
– Technology in use: SQL, Python, Tableau/Power BI, BigQuery.	

EDUCATION

San José City College	Sep 2022 — May 2023
• Bachelor of Marketing.	
University of Los Angeles Extension	Sep 2023 — Dec 2024
• Bachelor of Data Science.3	
University of San Diego	Sep 2025 — June 2027
• Bachelor of Data Science.	
• GPA (Current): 3.8 / 4.	
Duolingo English Test: 125/160	Expired: Nov 2026

ACTIVITIES

Player Churn Prediction — Machine Learning Practice	Jul 2024
• Develop a simple classification model in Python using scikit-learn to predict player churn from synthetic data	
• Get familiar with data preprocessing, train/test splitting, and model evaluation to explore predictive modeling workflows.	
• Explore behavioral features for churn analysis by utilize regression, classification, ensemble methods.
