Education

University of California, Riverside Expected June 2026
Bachelors of Science in Data Science Riverside, CA
Coursework: Database Management, Statistical Computing, Data Structures, Data Analysis Methods, Database Management Systems, Information Retrieval, Production and Operations Management, Project Management

Professional Experience

Southern California Edison - Contract Settlements Rosemead, CA
Data Science Intern June 2025 – Sept 2025

- Built a Pandas/Tkinter tool to auto-populate settlement Excel files, cutting **20–30 minutes** per file and improving monthly workflow efficiency
- Standardized monthly settlement data consolidation/validation, reducing errors and strengthening reliability of payment reviews
- Automated Outlook approval emails and documentation, streamlining multi-million-dollar payment reviews
- Created a hashing Python tool to flag duplicates/outdated files, reducing storage bloat and improving organization

US Department of Agriculture (USDA) Riverside, CA
Data Science Intern June 2024 – Sept 2024

- Utilized soil tension data for improving agricultural practices to optimize water usage during dry seasons.
- Created ML models such as time series and deep learning models to analyze seasonal weather patterns.
- Uncovered patterns and applied differencing techniques to facilitate moving average calculations using Pandas.
- Presented at the 2025 Plant and Soil Conference; recognized among top undergraduate posters by the American Society of Agronomy

Data, Analytics, and Science (DAS) in ACM Riverside, CA
Data Science Director & Projects Lead July 2024 – Present

- Created opportunities for **100+** students by establishing the inaugural Data Science project program.
- Directed projects across 10 week sprint cycles, leading survey design, modeling, and weekly check-ins to ensure timely, actionable deliverables
- Scoped and managed forecasting project using weather time series data, aligning tasks across team members, defining milestones, and driving execution to meet analysis deadlines

Technical Projects

Soil Tension Forecasting for California Fields | *Time Series Modeling, ARIMA* May 2024 – August 2024

- Developed a **machine learning** model for the U.S. Department of Agriculture to forecast soil tension levels, enhancing predictive accuracy and supporting agricultural decision-making
- Implemented **ARIMA** time series model and achieved 90% accuracy in forecasting soil tension levels

Bias Mitigation in Prison Inmate Data | *XGBoost Classifier, Exponentiated Gradient* Feb 2025 – Mar 2025

- Scaled, processed, and classified **COMPAS** inmate data based on key features to predict reoffending rate
- Used **Extreme Gradient Boosting** to train and evaluate a predictive model to test on in classification tasks based on our features
- Implemented an **Exponentiated Gradient** algorithm to mitigate bias in model predictions, improving demographic parity across sensitive groups

Technical Skills

Languages: Python, SQL, R, C++, Power BI, Power Automate, Visual Basic
Frameworks: Pandas, Matplotlib, Scikit-learn, Numpy, Ggplot2, Tidymodels, Seaborn, PyTorch, MySQL, PostgreSQL
Concepts: Database Management, Data Cleaning, Machine Learning, Linear Regression, KNN Regression, K-Means Clustering, ARIMA Time Series Modeling, Random Forest Classifier, Logistic Regression, Complex Queries, Database Administration, Web Scraping, Object Oriented Programming, Gradient Boosting, Reinforcement Learning, Query Optimization, Algorithm Optimization, Continuous Improvement, Automation
