+1 (628) 628 5111 | yayueucsd@gmail.com | [LinkedIn](#) | [San Diego, CA](#)

EDUCATION

University of California, San Diego

Master of Science in Computer Science

Double Major in Computer Science and Mathematics, Bachelor of Science

La Jolla, California, United States

Sep 2023 - Mar 2025

Sep 2019 - Aug 2023

TECHNICAL SKILLS

Programming Languages: Python, C++

Libraries and Tools: PyTorch, Sklearn, Pandas, Numpy, OpenCV, Git, Docker

ML Architectures: CNN, YOLO, Transformers(BERT, LSTM), RAFT

PROJECTS

Least Squares Based Supervised Classification, Python

Language: Python

- Built Binary, 1-vs-All, 1-vs-1, and Randomized Feature Classifier each based on Least Square implemented by SVD
- Trained classifier by 60000 784-vector (each component ranging from 0 to 255) data points, labeled from 0 to 9
- Successfully predicted 10000 data points with high accuracy; applicable to classify images

Framing and Sliding Window Protocol

Language: C

- Added framing and sliding window protocol to a sender-receiver system, enabling it to send messages and deal with timeout reply
- Defined own protocol to partition user input message into frames and generate corresponding header for checking message integrity
- Implemented sliding window protocol to let receiver reply to senders that response within 5 seconds, and send last in-order message

Simple Router's ICMP and ARP

Language: C

- Integrated Internet Control Message Protocol (ICMP) and Address Resolution Protocol (ARP) for a simple router
- Designed the extraction of Ethernet, IP, or ARP header to identify packet's type, and ARP cache to enqueue requests
- Programmed the response for valid packets and resolution of errors, such as timeout, wrong destination, corruption, etc

Measurement of CPU Cache Size and Latency

Language: C++

- Implemented large array allocation, varying stride of memory assessment, and measured time of RAM access
- Ran the scripts and tests on an AliCloud Server and collected data in CSV files
- Analyzed data in CSV file via Jupyter Notebook: divided total time spent by time of assessment, plotted latency vs size of memory assessment, and inferred the l1, l2, and l3 CPU cache size and latency

WORK EXPERIENCE AND LEADERSHIP

Growth Engineer

OrinTech Inc.

Nov 2025 - Present

- Constructed workflows and pipelines to collect market intelligence in text, image, video, etc.
- Generate business analytics reports with affinity trees and intuitive tags, using machine learning, Large Language Model

Teaching Assistant in Two Courses: Convex Optimization and Digital Systems Design

UC San Diego, United States

Jan 2024 - Aug 2024

- Held discussion, graded assignments, and answered questions for a class of size 150 in Convex Optimization.
- Held discussion, graded assignments, and answered questions for 160 students.
- Patiently helped students learn and achieve their goals with positive feedback (high recommended rates) in Digital Systems Design
