

YIOU HUANG

(858) 220-4927 | yih123@ucsd.edu | [linkedin.com/in/yiou-huang-028503375/](https://www.linkedin.com/in/yiou-huang-028503375/)

EDUCATION

University of California, San Diego (UCSD) Sep 2025 - June 2029

- Bachelor of Science in Psychology & Cognitive Science (Specialization in Design and Interaction)

PROJECTS

Computational Linguistics Analysis of AI User Reviews

Team Lead | 2025

- **Led end-to-end research project** analyzing **10,758** Google Play Store reviews across different AI apps to investigate how anthropomorphic language predicts user satisfaction, **managing 5-member team** through weekly meetings and progress tracking.
- **Developed novel dual-measurement methodology** combining **AnthroScore** (RoBERTa-based masked language modeling) and **VADER** sentiment analysis, discovering strong correlation ($r=0.56$) between anthropomorphic framing and emotional satisfaction.
- **Engineered complete data pipeline using Python** (pandas, spaCy, transformers, torch, nltk, etc.) for multilingual review processing, text normalization, anthropomorphism scoring, and statistical visualization of linguistic patterns.
- **Facilitated team collaboration** by initiating research topic, **resolving workflow conflicts** through structured task division, and coordinating final deliverables including statistical analysis, written report, and presentation deck

Zaispace (AI Social app, Live on App Store)

Product manager | 2025–2026

- **Led user research with 100+ college students** to identify emotional support and social connection needs; translated insights into core product requirements and identify target users.
- **Designed core system workflows** and **PRDs** for AI avatar creation, user-avatar bonding, and users social interaction features.
- **Built a scalable prompt engineering pipeline**, developing modular prompt templates with dynamic variable injection.
- **Established structured data collection and prompt evaluation frameworks**, running systematic testing and A/B experiments to optimize avatar creation quality, emotional realism of social inteaction, and safety alignment.

INTERNSHIP EXPERIENCE

InternUp (AI HR Tech, China)

Product Manager and Marketing Intern | 2025

- **Designed product architecture** and **LLM workflows** for an AI-powered career navigation platform, supporting university applications, job matching, resume optimization, and interview preparation.
- **Conducted user testing interviews** with **86 students**, **analyzed** feedback data, and **iterated** features to better serve target users.
- **Balanced user empathy** and **business goals** by contributing as both a PM and target user.
- **Supported go-to-market efforts** through **market research**, **competitive analysis**, and **user behavior insights**.

Empathy & Emotion Lab (UC San Diego)

Research Assistant | 2025-2026

- Supported research on wise empathy-based interventions for **emotional well-being**, focusing on how young people cope with negative emotions in digital environments.
- Refined mental health surveys to be **age-appropriate**, **culturally inclusive**, and **emotionally sensitive**, ensuring accessibility for diverse participants and expanding sample size.
- Designed an AI **“wise empathy” coach product** based on the background research, helping translate psychological research into supportive, human-centered product features through **user testing** and **prompt refinement**.

ACADEMIC COMPETITIONS

British Biology Olympiad (2024)

— **Gold Award**

• USA Biology Olympiad (2024)

— **Silver Medal**

• National Brain Bee (2024)

— **Bronze Medal**

• John Locke Psychology Essay (2023)

— **Commendation**

SKILLS

• **Programming:** Python, NLP Modeling, LLM Prompt Engineering, API Integration, SQL (basic), Java

• **Data Science & Machine Learning:** Natural Language Processing, Sentiment Analysis, Statistical Modeling, Regression & ANOVA, A/B Testing, Model Evaluation & Validation

• **Product Engineering:** LLM Workflow Architecture, Prompt Optimization Pipelines, Human-AI Interaction Systems, AI Safety & Evaluation Frameworks

• **Research Computing & Methods:** Computational Social Science, Survey Instrument Design, Quantitative Research Methods, Behavioral Data Analysis, Human-Centered AI Research
