EDUCATION

University

Bachelor of Science in Computer Science

City, US State

May 2024

EXPERIENCE

Full Stack Developer

June 2024 – Present

Medium Sized Organization

Florida, FL

- Revamped mortality verification algorithms using Polars and Pandas, achieving an over 10x speedup (from over 18 hours to just minutes), drastically improving performance and enabling near real-time processing.
- Led the complete overhaul and migration of user data from Quickbase to Postgres, designing and implementing a robust admin portal for managing authentication, user roles, account assignments, and granular permission control, ensuring a seamless transition and improved system scalability and security.
- Engineered a fully automated CI/CD pipeline leveraging GitHub Actions and Docker to ensure zero downtime deployments, enabling seamless scaling to meet fluctuating demand.
- Transformed internal data handling endpoints into a production, customer-facing API with OpenAPI Swagger integration, JWT-based authentication and API key management for robust security and account validation.
- Developed and integrated new micro service to optimize JSON, XLSX, XLS, and CSV parsing, previously done in the front-end, resulting in a 70% reduction in client-side load and improved user experiences.
- Designed and implemented an SFTP-based solution to handle sensitive file transfers, incorporating advanced features like rate limiting, authentication protocols, end-to-end encryption, and upload history tracking to ensure data integrity and compliance.

Software Developer

September 2022 – September 2023

Smaller Organization, Inc

Florida, FL

- Designed and developed an internal web application using Bootstrap, .NET Core Blazor, Entity Framework Core 6, and JavaScript, which facilitated cross-departmental collaboration by enabling easy access to order files stored in Azure Blob. The app streamlined the search process, resulting in significant time savings and increased efficiency in multiple departments.
- Achieved a 75% improvement in data entry time by developing Python-based automation scripts using Selenium for data entry testing on front-end websites, resulting in a time savings of approximately 300 minutes per month.
- Improved data integrity by creating PowerShell scripts to backup of local files to Azure Blob and linked them to a SQL database.

PROJECTS

QuickBooks Order Management System | .NET C#, Windows Presentation Foundation (WPF), SQL Server

- Analyzed and optimized the integration process between QuickBooks Desktop and the new application, ensuring data flow and enhanced efficiency.
- Utilized QuickBooks Desktop to integrate with the new application, obtaining inventory, customer, and pricing data, and facilitated the manipulation of such data for use by third-party applications.
- Ensured complete compatibility with the existing system architecture while introducing new features, including notes, the creation of multiple invoices, and updates on current statuses.

MangaGuesser | Typescript, Go, NextJS, Tailwind, SQLite, Docker – Website

- Architected a full-stack gaming platform with Go and Gin back-end, and Next.js front-end.
- Designed and implemented sophisticated game logic system with SQLite as a database featuring frequency-based algorithms to ensure fair manga distribution, preventing repetition.
- Built comprehensive session management system with JWT, supporting also httpOnly cookies.
- Created intelligent image serving system using a Nginx as a reverse proxy, implementing automated cleanup routines for performance.

TECHNICAL SKILLS

Languages: Python, C, SQL (Postgres, SQLite), JavaScript/TypeScript, Go, C#

Frameworks/Tools: Node.js, Angular, Material-UI, TailwindCSS, Git, Docker, Google Cloud Platform

Libraries: Polars, pandas, React, NumPy, Matplotlib, Axios, Seaborn
