

EDUCATION

University

*Bachelor of Applied Science, Computer Engineering*

- Relevant Coursework: Software Construction, Machine Learning, Object-Oriented Programming, Data Structures and Algorithms, Relational Databases, Computer Architecture, Linear Algebra

Expected Graduation: May 2027

Vancouver, BC

EXPERIENCE

Software Engineer Intern, *local company.*

Jan 2026 - Present

- Developed real-time dashboards in Angular/TypeScript for GridFlex, enabling 20+ utility operators to monitor power consumption and network topology across 1,000+ smart grid devices
- Reduced manual testing time by 60% by building automated UI testing framework with Pytest, Playwright and Selenium, validating 50+ test cases for GridValue dashboard workflows
- Designed test infrastructure for REST APIs and WebSocket services using Postman and OpenAPI validation, identifying 15+ critical bugs pre-production across 30+ endpoints

Full Stack Developer, *tech campus club*

Sept 2025 - Present

- Engineered a secure membership platform for 150+ users using Next.js (React/TypeScript), Tailwind CSS and PostgreSQL to manage real-time event registration and profile management
- Integrated site-wide authentication using Google OAuth 2.0, Context API and Row Level Security (RLS) policies with role-based access control, protecting user data across 4 user roles
- Collaborated with 3 developers to implement CI/CD pipelines using Jenkins for automated testing and deployment to AWS, accelerating release cycle by 40%

Software Developer, *engineering design team*

Sept 2024 – Dec 2025

- Developed autonomous navigation system using C++, ROS2 and Docker on Linux VMs, implementing pathfinding and obstacle avoidance algorithms to traverse Martian terrain
- Enhanced localization accuracy by 15% through multi-sensor fusion of LiDAR, IMU, and stereo camera data, implementing real-time object detection at 20+ FPS using OpenCV and YOLOv8
- Designed 10+ Unity simulation environments in C# for iterative testing across varied terrain conditions, reducing physical testing time by 50%

Language Data Analyst, *local data company*

Sept 2025 – Dec 2025

- Improved LLM performance by annotating 5,000+ data samples monthly across NLP, computer vision, and speech recognition tasks with 98% accuracy for model fine-tuning
- Identified and corrected 200+ QA errors weekly through systematic quality assurance protocols, reducing bias and improving dataset integrity for large-scale GPT and BERT based AI pipelines

PROJECTS

UniEvents (hackathon) | React/TypeScript, CSS, PostgreSQL, Supabase, Vercel

[GitHub](#)

- Developed full-stack event discovery platform using React, TypeScript, and Supabase with personalized recommendations, enabling 200+ students to discover campus events
- Integrated Instagram Graph API with OAuth authentication and web scraping fallback to synchronize real-time updates from 50+ club pages

CreditGuard: Credit Default Prediction System | Python, Scikit-learn, Pandas, Matplotlib

[GitHub](#)

- Engineered Scikit-learn ML pipeline predicting credit card defaults with 82% accuracy on 30,000+ records, comparing 5+ models via cross-validation and hyperparameter tuning
- Identified top 10 credit default risk factors using Pandas, Matplotlib and SHAP feature importance visualization

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript/TypeScript, PostgreSQL, HTML/CSS

Frameworks/Libraries: OpenCV, Pytest, Selenium, Pandas, Scikit-learn, React/Angular, MongoDB, ROS

Tools: Git, Linux, Docker, Supabase, Jenkins, Bash, Bootstrap, AWS, Gradle, Jira/Confluence, MS Office
