EDUCATION

Public Research University

Master of Science in Computer Science

Bachelor of Science in Computer Science

California, USA

September 2025 – September 2026

September 2022 – June 2025

EXPERIENCE

Software Engineer

September 2024 – January 2026

Healthcare Technology Company

Remote (US)

- Served as a developer consultant for the Security Engineering team, bridging Human Risk Management, Incident Response, and Security Operations through AI-driven solutions
- Built an internal **“Deep Research” architecture** that can plan, search, and synthesize across enterprise data sources (Splunk, Okta, CrowdStrike, Axonius, Jira/Confluence, AWS), with multi-hop retrieval and **source-level provenance/citations**.
- Served as technical advisor to Security Architecture; Contributed to the Secure Agentic Design Framework, released company wide to govern all Enterprise GenAI initiatives.
- Defined reference architecture, threat models, and control set for agentic AI (incl. Model Context Protocol), deploying DLP/PII redaction, safety guardrails, and end-to-end observability/compliance

Software Engineer Intern

June 2024 – September 2024

Healthcare Technology Company

California, USA

- Developed an NLP chatbot leveraging LangChain’s **Retrieval-Augmented Generation (RAG)** and a self-hosted, Kubernetes-based Milvus vector store for real-time Q&A on security policies, reaching **3,000** employees to boost security awareness
- Engineered a secure **AWS infrastructure** (EC2, ALB/NLB, Route 53, VPC) for high availability and scalability, orchestrating container deployment, load balancing, and networking to seamlessly support enterprise-wide access

PROJECTS

Agent Authorization & Policy Enforcement Platform

- First-place Hackathon winner (2025)
- Designed a trust layer for AI agents that enforces fine-grained RBAC/ABAC/Tool- and Parameter-Based Access Control across REST APIs and MCP tools with full auditability.
- Implemented an OAuth-backed policy engine that proxies enterprise REST APIs (e.g., Confluence) and enforces least-privilege access at both the tool level and HTTP parameter level.
- Built MCP and REST “guards” that ingest MCP tool manifests and OpenAPI specs to automatically derive policy surfaces and constrain agent tool calls and API requests.

Clinical Trial Report Generation Python, GEPA, Deep Research

Design Partner: BioTech Company

- Built a deep-research agent pipeline that ingests heterogeneous clinical trial artifacts (e.g., protocols, CSRs, tables/listings, publications) and generates CONSORT / ICH E3-aligned trial reports.
- Applied **GEPA prompt optimization** to evolve and tune system prompts across the pipeline, using automatic evaluation metrics to score candidates and drive iterative improvements.
- Built an evaluation harness (e.g., ROUGE/BERTScore and domain-focused factuality/field-level checks) and iterated with stakeholder feedback through a **design partnership** to solve a real use case.

Electrical Anomaly Detection System Python, Flask, C++, React

Sponsor: Large Energy Company

- Engineered a real-time anomaly detection system processing grid current/voltage at **8,000 samples/second**, triggering alerts for a centralized application, and enhancing grid stability monitoring by detecting deviations
- Shared results with industry stakeholders to support maintenance workflows and identifying service locations

TECHNICAL SKILLS

Languages: Python (Proficient), JavaScript (Familiar), C/C++ (Familiar)

Frameworks/Platforms: Pandas, LangChain, CrewAI, LangGraph, Node.js, React, Flask

Cloud: AWS, GCP; Cloud Deployment (Kubernetes, EC2, ALB/NLB); Cloud Security (VPC, Security Groups)

Tools: Git, VS Code, Atlassian
