EDUCATION

US T50

Master of Science in Software Engineering, Artificial Intelligence Concentration Sep. 2024 – Jun. 2026 (exp.) City, State

- GPA: 3.9/4.0 | Coursework: Machine Learning, Distributed Systems, Data Science, Continuous Delivery and DevOps

Japan T5

Bachelor of Engineering in Mechanical and Aerospace Engineering Oct. 2019 – Sep. 2023 City, Japan

- GPA: 3.6/4.0 | Focus: Quantitative modeling, data analysis, and technical reporting for research deliverables

EXPERIENCE

Software Engineering Intern

Jul. 2025 – Aug. 2025

Mid size US based management consulting company City, Japan

- Automated analytics reporting and forecasting on an enterprise AI enablement team; shipped agentic workflows and standardized pipelines using Python to improve forecast accuracy by 15% and reduce manual intervention by 20%
- Built LangChain agents with OpenAI APIs and tool-routing; saved 10 hours a week by integrating internal services via REST endpoints, structuring outputs in JSON to support dashboards, analysts, and automating reporting jobs
- Designed PostgreSQL schemas to store ML-ready datasets and run artifacts; refactored data ingestion pipelines into idempotent, validated loads using Redis caching to improve execution stability and reduce redundancy

Software Engineering Intern

Nov. 2024 – Jan. 2025

Banking company City, State (US)

- Shipped real-time P2P fraud detection pipelines on the Fraud and Risk ML platform team, engineering streaming inference in Python/TensorFlow and observability in Grafana to achieve 99.99% uptime under production load
- Engineered DCNNs and optimized graph execution through pruning and quantization in Python/TensorFlow to reduce inference latency by 20% and improve model recall by 8%
- Built a Pydantic-validated streaming API to ingest labeled events into Cassandra and PostgreSQL with queryable schemas and indexing for fast lookups, reducing query times by 50%
- Instrumented inference metrics into PostgreSQL and integrated Grafana/Prometheus alerting; containerized inference services using Docker, reducing deployment time by 40%, and enabling zero-downtime scaling on AWS ECS

Student Researcher

Aug. 2022 – Sep. 2023

(name) Laboratory, (name) University City, Japan

- Evaluated a low-cost fuel-cell electrocatalyst for performance and durability; designed experiments and analysis workflows to match industry benchmarks while reducing materials cost by 30% and decreasing synthesis times by 15%
- Developed Python automation scripts for simulations and data analysis, reducing processing time by 30%
- Executed 50+ synthesis/characterization experiments and standardized measurement pipelines; analyzed and visualized results in Python (Pandas)/R and authored findings for lab reviews and a paper accepted at the (conference name)

PROJECTS

Movie recommender | *React, Express.js, MongoDB, OMDb API*

- Built a full-stack movie discovery and recommendation app using collaborative filtering logic; implemented an Express REST API and MongoDB data models with indexing to support sub-50 ms search, writes, and personalized retrieval
- Added caching and pagination patterns to reduce redundant OMDb calls and reduced 95th percentile latency by 50ms
- Deployed with CI/CD on Vercel and increased recommendation relevance by 20% based on A/B testing evaluation

Huffman Coding Text Compression Algorithm and Visualizer | *Java, Data Structures*

- Implemented Huffman encode/decode with tries and priority queues plus Graphviz and JavaFX visualization; engineered compact bit-level serialization and achieved up to 50% text compression with 100% lossless reconstruction

TECHNICAL SKILLS AND AWARDS

Languages: Python, Java, R, MATLAB, SQL, Go, JavaScript, TypeScript, C++

Tools & Frameworks: Git, Docker, PyTorch, TensorFlow, Flask, Keras, Kubernetes, AWS, Azure, Terraform, JUnit, Pytest, PowerBI, GitHub Actions, PostgreSQL, MongoDB, Redis, Apache Airflow, Apache Flink, React, Express.js

Awards: MEXT Scholarship, JASSO Scholarship, (name) University Scholarship, Graduate Presidential Scholarship

Other: Japanese Language Proficiency Test Highest Level (N1) achieved, Member of (name) University Computer Science Society
