EDUCATION

SUNY University <i>Bachelor of Science in Technological Sys. Mgmt.</i> <i>Specialization in Computer Science</i>	May 2027 <i>Stony Brook, NY</i>
• Coursework: Object-Oriented Programming, Data Structures & Algorithms, Linear Algebra, Project Management, How to Build a Startup, Database Design	

TECHNICAL SKILLS

Languages: Python, C++, Java, Postgres/SQL, JavaScript, TypeScript, Ruby, HTML, CSS
Frameworks/Libraries: React, React Native, Vite, Express, Next, Flask, FastAPI, Rails, pandas, numpy
Developer Tools: AWS, Supabase, MongoDB, Git, Render, Figma, Postman, REST APIs, DevOps, Docker

EXPERIENCE

Freelance Software Engineer <i>Construction Company</i>	October 2025 – December 2025 <i>New York, NY</i>
• Built a full-stack website using TypeScript and Node.js, securing 2 new clients through an improved online presence and project showcase • Implemented a contact workflow using Resend API, enabling client requests to be delivered securely	
Data Analyst Intern <i>Waste Company</i>	June 2025 – August 2025 <i>New York, NY</i>
• Constructed Python and PostgreSQL data pipelines, cutting preparation time for 100+ weekly reports • Built anomaly-detection SQL scripts in a unified analytics database that reconciled account data, flagged missed pickups, and boosted route efficiency with fewer service errors • Built Excel dashboards to surface routing across regions, reducing manual review time by 40%	
Software Engineer <i>Startup</i>	May 2024 – September 2024 <i>New York, NY</i>
• Generated \$60K+ in pre-sales by building a React Native mobile application that integrated EEG-enabled earbuds to deliver real-time stress and focus insights to early users • Designed a scalable AWS backend to manage authentication, user sessions, and data ingestion • Developed a BLE pipeline to stream EEG signals in real time, enabling live visualizations • Supported 1,000+ active user sessions streaming live EEG telemetry	

PROJECTS

Stakemate <i>Next.js, React, Supabase, Auth0, NeuralSeek AI</i>	October 2025 - Present
• Built a student accountability platform where users join lobbies and stake points on assignments • Implented Nueral Seek's agentic AI to verify completion of essays, readings, and coding challenges • Created backend APIs using Next and Auth0 to manage lobby creation and authentication	
SCLip <i>FastAPI, OpenCV, Librosa, YOLOv8</i>	August 2025 - Present
• Built a computer vision system that analyzes gameplay recordings for shot accuracy improvement • Combined OpenCV motion analysis with Librosa audio cues to detect shot events with 33ms accuracy • Implemented stabilization and optical flow detection to isolate player movement from camera rotation	
Divi <i>React Native, TypeScript, Expo, OpenAI Vision</i>	January 2024 - June 2024
• Built an expense-splitting app achieving 95%+ receipt itemization accuracy by designing a dual OCR pipeline (Tesseract + GPT-4 Vision) • Integrated Supabase and Twilio SMS, automating expense notifications and reducing follow-ups • Leveraged CI/CD and Agile sprints to deploy updates with stable releases and faster iteration cycles
