EDUCATION

██████████ University, ██████████ DEC 2025
Master of Science in COMPUTER SCIENCE GPA: 4/4

- **Relevant coursework:** Algorithm Design, Big Data, Machine Learning, Responsible AI & the Law, Database Systems

██████████ University, ██████████ APRIL 2024
Bachelor of Science in STATISTICS AND COMPUTER SCIENCE; minor in FINANCE GPA: 3.72/4

WORK EXPERIENCE

Software Engineer Intern • ██████████ Lab, ██████████ University, ██████████ FEB - DEC 2025

- Built a [structured Eleventy/Vite/TailwindCSS frontend](#) that organizes creative computing tutorials for 50+ summer students.
- Developed and deployed a [React/Next.js CMS on Google Cloud](#) to streamline writing and managing new tutorials.
- Collaborated with researchers and designers to improve student and educator workflows, as well as overall engagement.

DevOps/Backend Engineer • ██████████ Lab, ██████████ University, ██████████ FEB - DEC 2025

- Developed a regional scoreboard plugin for CTFd supporting 2,000+ global players in a [Capture The Flag competition](#).
- Automated Docker-based deployment of CTF challenges, reducing manual build and launch effort.

Full-stack Software Engineer Intern • ██████████, ██████████ MAY - AUG 2025

- Deployed MVP services on AWS EC2 to enable early user testing, while streamlining infrastructure to reduce cost.
- Implemented new React Native features driven by user feedback, such as creating outing plans, to boost engagement.
- Integrated Redis caching into a Go backend, improving response times by 80%.

Comp. Sci./Statistics Course Assistant • ██████████ University, ██████████ SEPT 2022 - APR 2024

- Guided over 1,000 students through office hours and help sessions for an introductory algorithms and programming course.
- Built JUnit tests to automate grading for Java assignments, reducing turnaround time to a few days.
- Provided in-depth feedback on written and R-based programming assignments for 100+ students in advanced statistics courses.

PROJECTS

██████████, open source ██████████ client on Android • *Java/Kotlin*

- Reverse-engineered ██████████'s private API to build an open-source Android client focused on user privacy well-being.
- Designed a minimalist, non-addictive feed interface, and a backend that eliminates analytics to preserve user privacy.
- Collaborated with 20+ contributors; project reached 1,000+ GitHub stars and multiple trending placements.

██████████, public web frontends • *Unix, Docker, PHP, Oracle DBMS*

- Deployed 10+ privacy-focused frontends on Ubuntu using Docker and Nginx, serving 500+ users.
- [Adapted](#) an encrypted pastebin web app for Oracle Autonomous Database to maximize free-tier resource usage.
- [Extended](#) an RSS feed generator to export ActivityPub outboxes, allowing users to follow accounts anonymously.

██████████ and ██████████ • *HTML (Jekyll, Bootstrap), Node.js (React), CI*

- Created a user-friendly guide to promote ██████████ a messaging protocol, onboarding 500+ new users per month.
- Provides a [list of public servers](#), with a clean frontend and metrics kept up-to-date by a [CI/CD pipeline](#), to help new users.

██████████, messaging platform bridge • *TypeScript, SQLite*

- Built a bridge connecting two emerging messaging platforms, enabling cross-community communication.

██████████, hedge fund holding visualizer • *TypeScript (Next.js, React, d3), Python, MySQL*

- Developed an automated scraper for SEC datasets, removing manual collection across 10,000+ filings.
- Implemented interactive d3 visualizations to make hedge fund holdings easier to explore.

SKILLS

PROGRAMMING LANGUAGES: Python, Go, Java, JavaScript, TypeScript, Node.js, PHP
FRAMEWORKS & LIBRARIES: Django, Flask, React, Next.js, Vite, TailwindCSS, d3, Angular, Spring Boot
DATA & INFRASTRUCTURE: PostgreSQL, SQLite, Redis, Docker, AWS, Google Cloud, Microservices
TOOLS & PRACTICES: Unix/Linux, Bash, Git, CI/CD, GitHub Actions, Unit Testing, REST API
