

Skills

Programming: JavaScript, TypeScript, Python, SQL

Frameworks & Libraries: Angular, React, Flask

Tools: AWS, OpenShift, Docker, Figma, Storybook, Postman, Jest, Git, TailwindCSS

Experience

Software Engineering Advisor, [REDACTED] [REDACTED] Present

- Designed and implemented a new Provider Onboarding Document Storage System website to replace our old system. Developed the frontend with a team of 8 developers and transferred 4.5 billion records to the system
- Produced a UI Builder to help create new UI screens within our internal application, DentaQue, that business owners, project managers, and developers can all use with ease. Cut down development time of new screens by 70%
- Created an internal Dental IT Design System using Figma and Angular to aid with the ongoing expansion of our Dental IT site, which manages 10,000+ dental claims per day
- Developed an Angular web portal for the International Market segment that enabled data scientists to upload over 350 datasets to Tableau and request access for data tools across the enterprise
- Implemented an internal tool with an Angular frontend and Python microservices that enabled the business team to create over 200 new flowcharts helping external clients understand how data flows through Cigna's network
- Led a team of 3 engineers to automate the CI/CD pipelines for an internal URL shortener using Tekton and OpenShift

Software Engineering Intern, [REDACTED] May 2019 – Aug 2019

- Implemented an adoption service site with TypeScript and Node.js to combat loneliness in the workplace by connecting shelters with various companies. Won second place at [REDACTED] Innovation Challenge
- Introduced CI/CD pipelines and workflows with Docker images, Gitlab runners, and OpenShift pods, which sped deployment processes for different teams by 20%
- Collaborated with stakeholders to design a marketing site to replace PowerPoint for interactive sales pitches

Information Security Intern, [REDACTED] June 2017 – Aug 2017

- Developed an overlay plugin on Google Maps to track 100% of computers on Human Longevity's network using MySQL, PHP, XML, and JavaScript
- Created a script using Carbon Black's Python SDK to blacklist all potentially harmful IPs, according to multiple threat intelligence vendors
- Defined and designed SumoLogic and Carbon Black queries to find incidents considered harmful for [REDACTED] [REDACTED] computers, such as 100 or more network connections or applications that are not digitally signed

Projects

Stocks Bot (JavaScript, Node.js, Heroku)

- Discord bot for displaying stock information based on user input that can be integrated within any discord server. Serves over 500 requests per month

Education

[REDACTED] BS in Computer Science

[REDACTED] 2019
