

CHRIS HE

xih078@ucsd.edu | (858) 2038 209 | [linkedin.com/in/chris-he](https://www.linkedin.com/in/chris-he)

EDUCATION

University of California, San Diego
B.S. in Artificial Intelligence, GPA: 4.0/4.0

Expected June 2028

EXPERIENCE

iFund Asset Management Co., Ltd, Shanghai, China
Quantitative Research Intern (Machine Learning)

June 2025 - August 2025

- Researched LightGBM objective function that prioritizes accuracy on top-performing stocks for long-only strategy
- Designed weightedMSE that generated ~2% excess return over production benchmark; deployed in live trading
- Reframed stock-selection as ranking problem; experimented and diagnosed ListFold and LambdaRank variants as future research directions
- Constructed internal DNN benchmark with baseline GRU and Transformer-based models

Kunlun Tech Co., Ltd, Beijing, China
Research Intern (LLM Evaluation) @ Skywork.ai

July 2023 - August 2023

- Conducted qualitative analyses of model output in K5 math-tutoring tasks
 - Defined error label and annotation criteria for human labelers; results informed fine-tuning dataset curation
 - Initiated partnership with Zhonggu Charity; provided free access to Kunlun's AI tutor for 20k+ students
-

PROJECTS

STAR: A Multi-Agent Framework for Constructing Adaptive AI Tutor
Pioneer Research Scholar · Mentored by Dr. Francesca Xhakaj (CMU HCII)
[\[Paper\]](#) · [\[Faculty Evaluation\]](#) · [\[Core Figure\]](#)

February 2024 - July 2024

- Designed and implemented STAR (via LangGraph), a multi-agent LLM tutoring system for students' self-directed learning
- Conducted contextual inquiry, user interviews, and affinity diagramming to diagnose limitations of existing AI tutors
- Proposed student-enactment framework to anticipate students' confusion, personalize model response, and dynamically construct student profiles
- Controlled experiment demonstrated improved learning efficiency (~30% reduction in average interaction rounds) compared to using ChatGPT

Faculty evaluation: [top 5%](#) among undergraduates

Monkey Neural Signal Forecasting
Independent Research

December 2025 - Present

- Developed multivariate time-series forecasting model for monkey neural signal during object-reaching tasks
 - Preprocessed noisy neural recording with rolling-window averaging and frequency-band decomposition to stabilize training
 - Introduced neurobiology-inspired inductive bias through explicit modeling of cross-neuro-channel interaction patterns (via attention matrices learned in-context)
 - Achieved top-20% performance on public [National Science Foundation HDR leaderboard](#)
-

SKILLS

- Languages: Python, Java, C/C++
- Frameworks/Libraries: PyTorch, Qlib, Pandas, LightGBM, LangGraph
