(619) 818 6806

Education

University of San Diego, San Diego, California

Graduation

Bachelor of Science in Computer Science, Mathematics Minor

December 2026

Concentration in Data Science and Artificial Intelligence

- GPA: 3.44
- Relevant Courses: Computational Problem Solving, Discrete Mathematics, **Programming Abstractions and Methodologies**, **Advanced Computational Problem Modeling**, Introduction to Computer Systems, Linear Algebra, Ethics of AI and Robotics, **Object-Oriented Software Design**, Engineering Probability and Statistics, **Neural Networks**, Calculus I-III, Automata Computability and Formal Languages
- Extracurriculars: The Mulvaney Center Youth Engagement Initiative

Skills

- ❖ Proficiency in **Java, JavaScript, Python, C++**, Git and Bash
- ❖ Skilled with Microsoft Office and Google Drive
- ❖ Experienced in VS Code and IntelliJ
- ❖ Experienced in **Clean Code and SOLID Design**
- ❖ Knowledgeable of **SQL databases**
- ❖ **Problem Solving**, Adaptability and **Teamworking skills**
- ❖ Adept in **Github** usage

Experience

Backend Lead Intern

June 2025 -

AutomatiqGPT, San Diego, California

Dec 2025

- Architected and implemented the **backend ecosystem**, developing scalable routes, controllers, services, and configuration layers to support a **modular application structure**
- Designed, built, and managed **relational Supabase database**, optimizing queries and schema design for reliability and performance
- Directed **sprint planning**, task allocation, and debugging workflows, ensuring high code quality and on-time feature delivery
- Engineered and optimized **OpenAI API prompt workflows** to enhance the precision and consistency of AI-driven outputs
- **Recruited, interviewed, and mentored** new backend developers, improving overall team capability and development throughput
- Deployed and integrated the full-stack application via **Render** (backend) and **Vercel** (frontend), ensuring seamless connectivity and production stability.

Projects

Conversational Chatbot

Java, Swing, IntelliJ

- Implemented a functional chatbot capable of responding logically to human conversational input utilizing OpenAI's open API for natural language processing
- Added functionality to allow for the chatbot to properly maintain context for the current conversation and recall previous conversation
- Formed a user friendly interface using Java Swing that allows users to easily input messages, read responses and save and access previous conversations

Movie Review Rating Predictor

Python, Tensorflow, VS Code

- Built multiple text classification models to effectively classify 1-5 star ratings from a dataset of Amazon Movie Reviews from 2018
- Implemented Multi-Layer Perception, Convolutional Neural Network, Long Short Term Memory, BERT models for textual sentiment classification
- Achieved a peak accuracy of 82.15% accurately predicted movie review ratings using the BERT-based model

Song Similarity Application

Python, Tensorflow, Javascript, VS Code

- Implemented a YAMMnet and PANNs model for audio embedding to process over 100,000 songs
- Utilized Apple Music API to extract data, then vectorized
- Developed a clean, animated frontend for users to easily compare and find similar songs
