prisha.maiti@gmail.com | (858) 924-2908 | <https://www.linkedin.com/in/prisha-maiti-39a80a1a4/>

Looking for new challenging opportunities to apply data science skills to solve real-world business problems.

Technical Skills

- Programming Languages: Python (advanced), SQL (proficient), TypeScript (proficient)
- Machine Learning Frameworks/Data Analysis Libraries: PyTorch, Scikit-learn, Pandas, NumPy, Plotly
- Tools: Git/GitHub, Linux, AWS

Education

University of California, San Diego (2025-2027) | Bachelor of Science: Data Science, Minor: Business Economics

GPA: 3.614, Relevant Coursework: Machine Learning, Algorithms, Data Management, Marketing, Econometrics, Finance

Palomar College (2023-2025) | Associate of Science: Data Science

Relevant Coursework: Python, Data Structures, Macroeconomics, Microeconomics, Linear Algebra, Calculus, Differential Equations

Activities: Phi Theta Kappa International Honor Society: President 2024-2025, Vice President of Service 2023-2024

Experience

AI Developer Intern at San Diego Supercomputer Center

Jun - Aug 2023

- Developed a LangChain-integrated [solution](#) that automates database schema construction from natural language, **reducing manual workload by 80%** for the cross-functional team working on project [NOURISH](#).
- Applied directed graph algorithms to optimize supply chain logistics, identifying the most cost-effective routes to reduce financial barriers for low-income families and agricultural businesses.
- Translated engineering problems into data analysis tasks, ensuring reliability of the platform.

SWE Intern at San Diego Supercomputer Center

Jun - Aug 2022

- Constructed an interactive geospatial TypeScript dashboard that **cut down research time by 50%**, enabling public health officials to visualize and query global news trends in real-time.
- Integrated a backend Python API for a custom database of drug abuse news articles with the frontend UI to maintain data accuracy in the retrieval pipeline.
- Ensured compliance with clinical data requirements, delivering a production-ready tool and documenting methodologies and results for the final report to healthcare stakeholders and technical supervisors.

Projects

AVENUE

Jul 2025 - present

- Developing a computer vision pipeline in PyTorch to perform object detection and accident classification using a preprocessed dataset of **10,000+ experimental Google Street View images**.
- Applying Principal Component Analysis (PCA) to high-dimensional image features to identify and isolate key environmental variables contributing to road risk in developing regions.
- Combining anomaly detection results with background research about autonomous vehicles (AVs) in developing countries to propose a feasible solution to deploy an AV capable of driving safely on unmaintained roads.

Brandify AI

Mar 2025 - present

- Creating an agentic AI coaching [platform](#) that helps users build their personal brand, exemplifying one-on-one mentorship as opposed to generic LLM conversations.
- Combining individual goals and circumstances with success stories of established content creators to create a dynamic knowledge base and deliver personalized recommended strategies for each user.
- Evaluating performance of various models through A/B testing of Amazon EC2 instances to identify the most successful workflows in helping users achieve their unique set of goals.
