Brookfield, CT | P: +1 (475) 204-8682 | rg796@cornell.edu | [GitHub](#) | [LinkedIn](#)

EDUCATION

Cornell University

Ithaca, NY

Bachelor of Arts in Statistical Science, Computer Science; GPA: 3.71

Expected May 2027

Relevant Coursework: Machine Learning and Data Mining, Econometrics, Probability and Statistics, Object-Oriented

Programming and Data Structures, Linear Algebra

Involvements: Research Assistant, Computational Mechanics & Scientific AI Lab; Electrical/Software, Cornell Entertainment Engineering & Design Club; Cornell Data Journal; National Competitor, Cornell Powerlifting Team; YouTuber (180k+ subs)

EXPERIENCE

Cornell Bowers CIS

Ithaca, NY

CS 1110 Consultant

Aug 2025 – Dec 2025

- Held weekly consulting hours to guide 100+ students through **Python** fundamentals, algorithms, and object-oriented design
- Assisted with debugging, assignment support, and conceptual explanations, improving student course performance
- Collaborated with teaching staff to grade and ensure consistent support across labs, assignments, projects, and exams

Cryptonest (Google Cloud Platform Startup)

Houston, TX

AI/ML R&D & Business Development Intern

Jun 2025 – Aug 2025

- Built and deployed an **Efficient Frontier Dashboard** in **Python/Flask** with **Plotly** visualizations, allocation attribution, multi-period PnL tracking, and signal-based asset filtering, improving simulated performance by **1.4×**
- Developed an automated **max-Sharpe rebalancer** and **random-forest regime classifier** using **scikit-learn** to dynamically reweight exposures, delivering **1.5×** gains over static portfolios
- Modularized the optimization pipeline into a **Portfolio Analyzer Agent** using **MCP** and **LangGraph** for automated portfolio diagnostics and personalized buy/sell recommendations

PROJECTS

TerminalTok: OCaml-Based TikTok Clone for the Terminal | [GitHub](#)

Oct 2025 – Dec 2025

- Built a hybrid ML recommender combining content-based filtering, collaborative filtering, and matrix factorization
- Implemented matrix factorization from scratch with gradient descent, L2 regularization, and sigmoid-bounded predictions
- Engineered ranking and scoring pipelines using likes, watch time, online training, and top-K neighbor selection

Exoplanet Search Project (Cornell Data Journal) | [GitHub](#)

Feb 2025 – May 2025

- Led a 5-person team analyzing and filtering 5,000 exoplanets from NASA data using **Python (pandas)** to assess habitability
- Built interactive visualizations with **R** to display size, temperature, stellar types, and other habitability factors
- Identified **K2-3 d** and **LHS 1140 b** as top Earth-like candidates and presented findings at end-of-year symposium

Powerlifting Total Prediction Project | [GitHub](#)

Feb 2025 – Apr 2025

- Predicted next-meet totals using linear regression in **Python** ($R^2 = 0.983$) with demographic and prior performance features
- Built a time-series dataset from 640K+ meet records by ordering results per athlete and generating a *NextTotalKg* target
- Visualized performance trends across weight classes, sex, and federations using **pandas** and **Matplotlib**

ACTIVITIES

FIRST Robotics Team | [GitHub](#)

Brookfield, CT

Captain, Driver, Programming Team Lead

Nov 2021 – Jun 2024

- Engineered autonomous control stack in **Java** with **PID**, **FF controllers**, and **odometry** to reduce navigation error by **75%**
- Built a **YOLOv5**-based vision system to track target distance, boosting shot accuracy to **80%** across the game field

MITES Semester at MIT

June 2023 – Dec 2023

- Designed (**CAD**), built, [programmed](#) (**C++**), and [presented](#) an autonomous robot that drew pictures (Robotics Course)
- Interviewed MIT researchers for a science writing [article](#) on AlphaFold and AI (Science Writing Course)

TECHNICAL SKILLS

Languages: Python, Java, C++, OCaml, R, SQL, Stata

Tools: pandas, NumPy, SciPy, scikit-learn, PyTorch, TensorFlow, Flask, Git, GCP, LangChain, LangGraph, MCP
