EXPERIENCE

- **Service Based Firm** Redacted
Software Engineer in Data *June 2024 - Present*
 - Built and operated ETL pipelines using Kafka, Spark, and Snowflake, **processing 200K+ shipment events/day** with **end-to-end latency under 5 minutes**, enabling near real-time shipment tracking for downstream customer-facing systems.
 - **Led the migration of 40+ legacy Informatica pipelines to Airflow + dbt, reducing average pipeline runtime by 65%**, improving failure recovery, and eliminating manual reruns through standardized orchestration and testing.
 - Implemented a CDC-based event processing layer using Postgres CDC, Kafka, and Snowflake to reliably ingest and **process over 500GB of data per week from 60+ operational tables.**
- **Small Company** Redacted
Software Engineer *July 2023 - June 2024*
 - **Re-architected an Order Processing monolith into Go microservices**, cutting average **order-fetch latency from 1000ms to 200ms under peak load** and increasing overall system uptime.
 - Built and scaled a Google-Sheets-style, **real-time collaboration app (C#, RabbitMQ) synchronizing operational inventory** across multi-screen loading docks for 1000+ concurrent users, **preventing record overwrites and driving 4x higher fulfillment accuracy across all warehouses.**
 - **Designed and implemented observability dashboards (Grafana + Prometheus)** for microservices and distributed queues, **reducing MTTR by 40% on average and enabling proactive alerting for production failures.**
- **FinTech** Redacted
Software Engineer *June 2022 - June 2023*
 - Built and owned **4 quote aggregation microservices** in a distributed, **event-driven AWS architecture using Java**, integrating multiple third-party insurance APIs and Redis for low-latency caching, **enabling high-throughput quote retrieval across large-scale (100K+) quote configurations.**
 - **Reduced user wait times by over 30%** by identifying and eliminating server-side bottlenecks in legacy code through targeted multi-threading optimizations.
 - Integrated automated testing and **static code analysis into Jenkins CI/CD pipelines**, reducing **production regressions by 25%** and enabling faster, safer hotfix deployments.
- **Small Company** Redacted
Software Engineering Intern *May 2021 - Aug. 2021*
 - Designed and implemented new **features in a C# enterprise application**, contributing production-ready code and enhancing functionality for an application touching 100s of daily active users.
 - **Reduced manual efforts by 60% by developing Python ETL data pipelines** to migrate data from Microsoft SQL Server to PostgreSQL and scheduling **daily recurring tasks in Apache Airflow.**
 - **Developed comprehensive automated test suites using Cucumber and XUnit**, significantly improving coverage and ensuring correctness of core business workflows.
 - Collaborated with stakeholders to design and implement an internal automation tool that streamlined master data management workflows, **reducing manual interventions and lowering error rates in recurring processes.**

EDUCATION

- **T50 State School** Redacted
Bachelor of Science in Computer Science; GPA: 3.6

PROGRAMMING SKILLS

- **Languages:** Python, Java (Springboot), C#, Go, Javascript (React.js, Node.js), SQL
- **Tools:** Git, Kafka, Flink, Spark, Apache Airflow, JIRA, AWS (Lambda, SQS), Azure (Function Apps, ARM), OCI (Oracle Cloud Infrastructure), Redis, MongoDB (NoSQL), Snowflake, Docker
