EDUCATION

University of California, San Diego

B.S. in Data Science and Cognitive Science

- Minors in Mathematics and Supply Chain Management; GPA: 3.90

La Jolla, CA

Sept 2023 - June 2027

EXPERIENCE

SDE Intern

June 2025 – September 2025

Amazon Web Services

San Diego, California

- Designed and implemented an unsupervised ML-based anomaly detection service to improve safety of AWS EC2 server deployments, enabling automated detection of abnormal deployment behavior at scale and accelerating rollback decisions during hardware rollouts.
- Built and productionized the service using AWS CDK, SageMaker, Lambda, and S3, integrating it into existing deployment protocols where it has been adopted by full-time engineers.
- Gained on-call exposure to resolve real-time client errors under incident scenarios.

Data Science Intern

October 2024 – June 2025

Hey Social Good

La Jolla, California

- Worked with the CEO to operationalize machine learning-based classification of sustainability data, converting 10,000+ subjective data points into consistent scores that informed internal sustainability evaluations and dash-boarding results.

Research Assistant

April 2025 – Present

Chiba Lab, UC San Diego

La Jolla, California

- Designed and built an end-to-end full-stack application and real-time data pipeline for an IoT-based educational platform, integrating embedded device streams to support live classroom analytics across 30+ devices and research-grade data collection for a forthcoming publication.

Instructional Assistant

January 2025 – Present

Hahcioğlu Data Science Institute, UC San Diego

La Jolla, California

- Supporting 200+ students in Database Management Systems and Theoretical Foundations of DS by maintaining the course website, hosting office hours, and developing SQL, Python, and ML demos to enhance student learning.

PROJECTS

Fire-Ready Forests | *Python, E.D.A., Machine Learning*

- Led end-to-end ML modeling and data engineering for ecological tree classification in collaboration with ecological researchers, achieving 89.6% PFT accuracy and ~99% R^2 CBH/CR imputation across 500K+ TLS records.
- Built a PyTorch benchmarking pipeline to evaluate generative model tradeoffs, comparing Stable Diffusion and conditional DC-GANs across quality and efficiency metrics to guide model selection decisions on CelebA and CIFAR-10 (IS=6.85, FID=164; IS=5.2, FID=92).

Comparative Analysis of Stable Diffusion & cDC-GANs | *Python, PyTorch, GANs, Diffusion*

- Built a PyTorch pipeline to tune GANs across multiple loss functions and optimizers; benchmarking Stable Diffusion vs. conditional DC-GANs on CelebA (IS=6.85, FID=164) and CIFAR-10 (IS=5.2, FID=92).

LEADERSHIP

- **President** — Data Science Student Society @ UC San Diego
- **Captain** — AWS Cloud Club @ UC San Diego
- **Leader** — Google Developer Group on Campus @ UC San Diego

TECHNICAL SKILLS

Programming: Python, SQL, Java, C++, C, JavaScript, HTML, CSS, Git/GitHub, APIs

Software Tools: Pandas, Numpy, Matplotlib, Scikit-learn, Pytorch, Tensorflow, Apache Spark, AWS Cloud

Domains: Cloud, ML/AI, GenAI, Data Structures & Algorithms, Full-Stack, Data Visualization, Agile Development

Soft Skills: Project Management, Organization, Presentations, Detail-Oriented, Communication, Quick-Learner
