EDUCATION

University of California, San Diego

Bachelor of Science in Data Science | GPA: 3.65

San Diego, CA

Expected: March 2027

EXPERIENCE

The Walt Disney Company | Data Operations Intern

June. 2025 - Sep. 2025 | Burbank, CA

- Utilized Tableau, PySpark, and SQL for data aggregation, cleaning, and visualization to transform raw data from global movie theaters and build plans into structured datasets for efficient worldwide distribution planning.
- Assisted in developing the **GRID archival system** for Disney productions by integrating multi-source data, capturing key metadata such as **release dates, cast, directors/producers, and product IDs**.
- Built a **data pipeline** to extract and populate key information from databases into ARIEL, Disney's dubbing studio management system.

Data Smith Lab - UC San Diego | Research Assistant

Mar. 2025 - Present | San Diego, CA

- Used BFI-2 traits to **generate synthetic personas** that simulate child interactions with large language models.
- Conducted parental studies to evaluate parent concerns, desired moderations, and transparency preferences in children's use of LLM-based tools, informing the design of **predictive model** that uses contextual features to identify the most influential factors shaping parental moderation decisions
- Developed a parental-controlled LLM through custom **prompt engineering**, enabling dynamic response adaptation based on child characteristics and parental settings.

TESIAC | Data Science Intern

Nov. 2024 - June. 2025 | San Diego, CA

- Assessed mobility gaps in Mission Valley and La Jolla by conducting community surveys, engaging with local businesses, and submitting data requests to hospitals and public facilities.
- Utilized **Python** and **SQL** for **statistical analysis** and **geospatial mapping**, producing actionable insights on optimal routes, vehicle types, and consumer cost sensitivity.
- Authored a comprehensive, data-driven urban planning report recommending autonomous shuttles, expanded cycling networks, and EV charging infrastructure, contributing to policy discussions on sustainable transit solutions.

UC San Diego | CSE Undergraduate Instructional Assistant

Jul. 2024 - Sep. 2024 | San Diego, CA

- Introduced 50+ incoming UCSD students to **data structures, algorithms, and machine learning** concepts by **designing and evaluating Python-based programming assignments**, enhancing their technical foundation.
- Mentored students to build confidence in **Python, web development (HTML, CSS, JavaScript), and ML tools**
- Lead tech project manager of the creation of 25+ projects in web development, machine learning, and computer engineering

Data Science Student Society | Team Director

Sept.. 2024 - Present | San Diego, CA

- Managed operations for a 400+ member organization by coordinating technical workshops and networking events, resulting in enhanced student learning and professional development opportunities.
- Organized data science hackathons and speaker panels, connecting students with industry professionals in AI, data analytics, and software engineering, leading to increased engagement and career growth opportunities for participants.

PROJECTS

League of Legends Prediction and Recommendation Model

Feb. 2025

Python, Scikit-learn, HTML, CSS, JavaScript, Flask

- Web scraped data for 150+ champions from League of Legends' public website using BeautifulSoup to analyze champion statistics, counter picks, team synergy, and win rates.
- Developed a Random Forest classification model with a 80% accuracy to predict win probability based on pre-game factors.
- Designed a champion recommendation system using a Scikit-learn pipeline incorporating MultiLabelBinarizer, OneHotEncoder, TF-IDF Vectorizer, and cosine similarity to identify top 10 champions aligned with user-selected playstyles.

StanScan.ai - Web Application

Apr. 2025

Python, JavaScript, Node.js, HTML/CSS, Google Trends API, Google Search API, BeautifulSoup, DistilBERT

- Developed a full stack web application that allows users to search for any celebrity and view a letter-grade public sentiment score with an interactive timeline of sentiment and popularity trends with embedded news articles.
- Web scraped celebrities from FamousBirthdays.com using BeautifulSoup and integrated Google Trends API
- Queried Google Search API to collect and organize over 3,000 news articles by celebrity and year, building a searchable media coverage database, then applied DistilBERT for sentiment analysis

SKILLS

Programming Languages: Python, Java, SQL, JavaScript, HTML, CSS, MATLAB, SQL

Frameworks and Technologies: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly, PySpark, BeautifulSoup, React, Tableau, AWS
