Summary

AI & Data Science Intern with solid experience building Python-driven analytical and machine learning solutions. Developed a chatbot for Innawi's POS system using Flowise and OpenAI LLMs, and engineered RAG pipelines with Qdrant to accelerate data retrieval. Strong foundation in data analysis, experimentation, and translating complex datasets into actionable insights. Eager to apply data science expertise to create intelligent, data informed products that drive business impact.

Education

University of California, San Diego (UC San Diego)

Sep 2025

B.S., Data Science

De Anza / Foothill College CA

Sep 2023 - Jun 2025

A.S., Data Science

Experience

Innowi Inc.

Aug 2025 - Nov 2025

AI & Data Science Intern

- Researched and developed a chatbot with Flowise, the OpenAI API, and Python for Innawi's POS ecosystem, improving user interaction and system efficiency
- Engineered RAG pipelines with Qdrant to streamline data retrieval, resulting in faster access and improved performance of analytical processes.
- Prototyped and refined Python based AI/ML workflows, enabling rapid experimentation and feature validation that strengthened the data analysis pipeline

Developers Guild @ De Anza College

Jan 2024 - Jun 2025

Project Lead / Ambassador

- Taught Python and API development to 35 students through biweekly Discord sessions, facilitating interactive coding exercises and projects that improved students' practical software development skills.
- Facilitated meetings and managed funding requests as ICC Ambassador, optimizing event planning and ensuring timely resource allocation.

Projects

Startup Analysis Project

Sep 2025 - Dec 2025

- Designed and executed an end to end data science project on real-world startup and funding datasets, spanning data cleaning, exploratory analysis, visualization, and final interpretation.
- Investigated how funding levels, industry sectors, and geographic factors relate to startup acquisition and failure outcomes using descriptive statistics and visual analytics.
- Built clear, insight-driven visualizations, to uncover patterns, validate assumptions, and support data-driven conclusions.
- Synthesized analytical findings into actionable business insights by translating raw data into strategic understanding.

Facial Emotion Classification using CNN

Aug 2024

- Developed a convolutional neural network (CNN) in TensorFlow/Keras to classify facial expressions (happy vs. sad).
- Designed multi-layer architecture with Conv2D, MaxPooling, and Dense layers for feature extraction and classification.
- Optimized training with RMSprop, binary cross-entropy loss, and earlystopping to improve accuracy and reduce overfitting.

Skills

- **Programming:** Python, C++
- **Data Science & Analysis:** Data Analysis, TensorFlow, NumPy, Pandas, Plotly, Jupyter Notebooks, Matplotlib, Data Visualization
- **Frameworks & Tools:** Streamlit, RAG Pipelines, OpenAI API, Qdrant, LLM Applications, Flowise

Certifications

- Introduction to TensorFlow for Artificial Intelligence, Machine Learning, and Deep Learning

Languages

- English
- Arabic
- French
