EDUCATION

University of California, San Diego, Halicioğlu Data Science Institute

La Jolla, CA

B.S. in Data Science, ML and AI Specialization

Sep. 2024 – Jun. 2028

Minor in Mathematics, Cognitive Science

Dual Enrollment

Kirkland, WA

GPA: 4.00/4.00

Sep. 2022 – Jun. 2024

TECHNICAL SKILLS

Machine Learning: Feature Engineering & Selection, Model Evaluation, Bias Inspection, Data Pipelines, Reinforcement Learning (MDPs, Reward Design), Supervised Learning

Languages: Python, Java, SQL (Postgres, SQLite)

Tools: Google Cloud Platform (Vertex AI, Cloud SQL, App Engine), Jupyter, Marimo, Tableau, Streamlit, Git, MATLAB, VS Code, IntelliJ

Libraries: Pandas, NumPy, SciPy, Scikit-learn, Matplotlib, Seaborn, Plotly, Folium, TensorFlow

EXPERIENCE

Instructional Assistant

Jan. 2026 – Present

Halicioğlu Data Science Institute

- **Hosted weekly office hours to support 300+ students in Python skills**, clarifying concepts and debugging assignments; graded weekly assignments; proctored exams.
- Designed challenging questions and lead large exam review sessions.

ML & Data Science Intern

Jun. 2025 – Sep. 2025

Redemption Business Solutions

- **Built an end-to-end risk classification model based on customer payment behavior**, reducing manual review time and enabling personalized payment plan recommendations for rent-to-own customers.
- Consolidated fragmented Excel and retailer data into Cloud SQL (PostgreSQL), designing schemas and ETL pipelines to process 15K+ transactions for automated ingestion into Google Cloud.
- Analyzed behavioral indicators of payment risk to remove redundant features.

Data Science Intern

Mar. 2025 – Aug. 2025

Carbon Cred

- **Developed interactive commute dashboard to visualize travel patterns from 100K+ geolocation pings**, helping users verify trip validity and supporting accurate carbon credit allocation.
- Designed dynamic KPIs and frequency visualizations in Streamlit using Folium and Plotly, tracking commute modes, emission impact, and user engagement trends.
- Performed EDA to detect anomalies and engineer features; created baseline classification models evaluated with ROC-AUC, precision, and accuracy to inform model development.

PROJECTS

Robotic Arm Reinforcement Learning

Nov. 2025 – Present

Triton Droids

- Implemented and trained reinforcement learning policies for Panda robotic arm manipulation in simulation using robosuite, designing state/action representations and reward systems from proximity, motion efficiency, and task completion; structured policies to enable transfer to physical ARCTOS arm.
- Designed actor-critic networks and leveraged demonstration data to accelerate learning of arm motions.
- Built physics-based simulation environments and configured objects in MuJoCo to test and evaluate learned policies.

Data Science Research & Publications | [Medium](#)

Oct. 2024 – Present

UCSD Data Science Student Society

- **Researched unique topics in data science with peers to publish quarterly Medium articles**, making complex concepts accessible to UCSD students, alumni, and professors.
- Publications included historical sentiment analysis over 45+ years of student newspaper articles, exploration of NLP frameworks for speech recognition, and RNN-based music generation on 200+ hours of MIDI data.
