

GABRIEL BORJAS-PEREZ

University of California, San Diego, La Jolla, CA
510-695-6802 • borjasgabriel05@gmail.com

EDUCATION

Bachelor of Science, Data Science

Expected June 2027

University of California, San Diego (UCSD)

Relevant Coursework: Principles of Data Science, Data Structures for Data Science, Data Structures and Algorithms, Research Methods, Statistical Analysis, Theoretical Foundations of Data Science 1 & 2, Practice and Application of Data Science

SKILLS

Languages	Python, Java, R, MATLAB
Data Analysis	Hypothesis Testing, Pandas, NumPy
Tools	Jupyter Notebooks, Git, GitHub, J-Unit Testing
Data Science	Data Cleaning & Merging, Exploratory Data Analysis (EDA), Feature Engineering, Statistical Testing, Missingness Analysis, Prediction Modeling
Other	Reading & Understanding Technical Documentation

PROJECTS

Premier League Set-Piece Height Analysis

Oct 2025 – Present

Python, Sports Analytics

- Analyzing multi-season Premier League data to measure how player height relates to goals from corners, free kicks, and long throw-ins, while accounting for minutes played, position, and tactical role.
- Studying aerial-duel outcomes and incorporating research showing how technique, positioning, and timing contribute to success beyond raw height.
- Evaluating how the league's shift toward set-piece-focused tactics may be amplifying the relationship between height and scoring efficiency.

Healthy vs. Unhealthy Recipe Ratings Analysis

Oct 2025 – Present

Python, EDA, Hypothesis Testing, Modeling

- Studying whether “healthier” recipes—defined using nutritional metrics like protein DV%, fat DV%, and sugar—receive higher user ratings.
- Cleaned and merged multi-table datasets; engineered health labels and nutrition-based features.
- Performed EDA (univariate and bivariate) to explore relationships between nutrition and user ratings.
- Running hypothesis tests and rating-prediction models to quantify differences and evaluate predictive power.

Lyrics Search Tool

Dec 2023

Python, Pandas

- Built a command-line lyrics search tool using keyword-based text matching.
- Processed and cleaned large text datasets using Python and Pandas.

Meteorite Drop Location Analysis

Dec 2023

Python, Data Visualization

- Analyzed global meteorite landing patterns using cleaned and processed datasets.
- Created visualizations with Matplotlib and Seaborn to highlight geographic trends.

WORK EXPERIENCE

Research Analyst - Eclipse Analytics

Apr 2025 – Present

- Analyzed sports datasets using statistical models to uncover meaningful insights.
- Cleaned, visualized, and interpreted datasets to support analytical findings.
- Collaborated with peers on sports analytics projects applying classroom concepts to real-world data.
